

Delivering  
powerful  
solutions.

**EATON**

*Powering Business Worldwide*

**NAHAD**  
Industrial Hose  
Listed Manufacturer

## Important — User Responsibility

The user should carefully observe the precautions listed in this catalog or brochure, including the recommendations on the selection of hose and fittings on the relevant pages on fluid compatibility. In addition, care should be taken not to exceed the minimum bend radius listed for each hose size and type in the hose section. Maximum operating pressure should not exceed pressures listed in the hose data. Instructions for assembling fittings to different hose should be followed carefully to ensure the performance of the completed assembly.

 **WARNING** Application considerations must be observed in selecting appropriate components for the application of these products contained herein. The failure to follow the recommendations set forth in this catalog may result in an unstable application which may result in serious personal injury or property damage.

 **WARNING** Eaton corporation or any of its affiliates or subsidiaries shall not be subject to and disclaims any obligations or liabilities (including but not limited to all consequential, incidental and contingent damages) arising from tort claims (including without limitation negligence and strict liability) or other theories of law.

Failure to follow these processes and product instructions and limitations could lead to premature hose assembly failures resulting in property damage, serious injury or death.

## Product Warranty

The Eaton Hydraulics warranty policy is located at [www.hydraulics.eaton.com/warranty](http://www.hydraulics.eaton.com/warranty)

# Reliable Solutions

Eaton Industrial Hose  
offers dependable  
parts and solutions  
to optimize  
**Performance.**

When you work with Eaton, you can count on a comprehensive range of products that are designed for harsh and hazardous operating environments that are part of the day-to-day requirements of your industry. Eaton delivers safe and reliable products to help sustain mission-critical systems working every hour of every day.

- Dependable Solutions to Drive Your Performance
- Innovation to Take on the Toughest Challenges

# Reliable Solutions Service

## Eaton Industrial Hose

### Air and Multipurpose

### Chemical

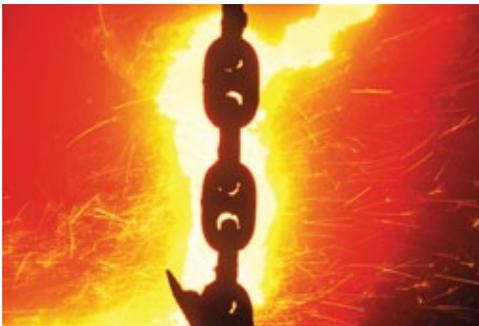

### Material Handling

### Petroleum

### Steel Mill

### Food and Beverage

### Tank Truck

### Refineries

## Markets and Applications

- Dry bulk transfer
- Hot air blower
- High pressure cleaning
- Washdown of food processing
- Boat cleaning
- Sand blast cleaning
- Water suction and discharge
- Transfer of cleaning agents
- Fertilizer and pest control
- Hot tar pumping
- Nitrogen transfer
- Hydrocarbon drain
- Paint spray
- Rotary drilling on oil rigs
- Fuel Oil transfer
- Food & beverage dispensing
- Water and bilge lines
- Transfer of non-dairy products
- Bulk liquid transfer
- Acid & Chemical transfer
- Petroleum transfer and mixing
- Tank spinners
- Steam transfer
- ...and many more!

# Application Data

## Important Safety Information

### Read this page before using any of the products/information in this catalog.

This catalog is designed to be used as a guide in selecting the proper hose for the applications listed herein. It contains many cautions, warnings, guidelines, and directions for the safe and proper use of Eaton Industrial hose. All these directions and footnotes should be read and understood before specifying or using any of these hoses.

Throughout this catalog, potentially harmful situations are highlighted with the following symbols.

 This symbol is used to indicate imminently hazardous situations which, if not avoided, will result in serious injury or death.

 This symbol is used to indicate potentially hazardous situations which, if not avoided, could result in serious injury or death.

 This symbol is used to indicate potentially hazardous situations which, if not avoided, may result in property or equipment damage.

Some of the most common problems in the chemical hose industry result from improper hose and coupling selection, improper assembly techniques, failure to correctly inspect and test hose assemblies, and improper cleaning practices and hose assembly storage techniques.

In turn, these situations can lead to material leakage, spraying, spattering, end blow-offs, explosions, and other situations that may result in serious personal injury and property damage.

Personal injuries caused by improper hose assembly specification, installation, and usage could include cuts and abrasions, serious burns, irreparable eye damage, or even death. Therefore, for your safety and the safety of others working around you, Eaton strongly urges you to read and comply with all safety information printed in this publication.

 **WARNING:** Failure to properly follow the manufacturer's recommended procedures for the care, maintenance and storage of a particular hose may result in its failure to perform in the manner intended and may result in serious injury, death, and damage to property.

 **WARNING:** Testing can be dangerous and should be done only by trained personnel using proper tools and procedures. Failure to follow such procedures might result in serious injury, death, or damage to property.

**Consult the coupling manufacturer to make sure you choose the correct coupling and proper assembly for the application, or contact Eaton Technical Support.**

**Before using any hose in this catalog, consult the safety section in this catalog and the guidelines on the Eaton web site for the most current information or contact for North America contact Eaton Technical Support 1-888-258-0222 for global support contact your local Eaton technical representative.**

### Selection of Hose

Selection of the proper Eaton Industrial hose for an application is essential to the proper operation and safe use of the hose and related equipment. Inappropriate hose selection may result in hose leakage, bursting, or other failure which may cause serious bodily injury

or property damage from spraying fluids or flying projectiles. To avoid serious bodily injury or property damage resulting from selection of the wrong hose, you should carefully review the information in this catalog. Some of the factors to consider in proper hose selection are known as **STAMPED:**

- S - Size**  
(I.D., O.D. and length)
- T - Temperature** of material conveyed and environmental
- A - Application,** the conditions of use
- M - Material** being conveyed, type and concentration
- P - Pressure** to which the assembly will be exposed
- E - Ends;** style, type, orientation, attachment methods, etc.
- D - Delivery** testing, quality, packaging, and delivery requirements

These factors and the supplemental information contained in this catalog should be considered in selecting the proper hose for your application. If you have any questions regarding the proper hose for your application, please contact Eaton for North America contact Eaton Technical Support 1-888-258-0222 for global support contact your local Eaton technical representative.

### Proper Selection of Hose Ends

Selection of the proper Eaton Industrial hose end or coupling is essential to the proper operation and safe use of hose assemblies and related equipment. Inadequate attention to the selection of the end fittings may result in hose leakage, bursting, or other failure which may cause serious bodily injury or property damage from spraying fluids or flying projectiles. In order to avoid serious bodily injury or property damage resulting from selection of an incompatible hose end or coupling, you should carefully review the information in this catalog. Some of the factors which are involved in the selection of the proper hose couplings are:

- fluid compatibility
- temperature
- installation design
- hose size
- corrosion requirements
- fluid conveyed

The given hose and hose end selection factors and the other information contained in this catalog should be considered by you in selecting the proper hose end fitting for your application.

If you have any questions regarding the use of hose/hose ends, for North America contact Eaton Technical Support 1-888-258-0222 for global support contact your local Eaton technical representative.

### Hose Installation

Proper installation is essential to the proper operation and safe use of the hose assembly and related equipment.

Improper hose assembly installation may result in serious injury or property damage caused by spraying fluids or flying projectiles. In order to avoid serious bodily injury or property damage resulting from improper hose assembly installation carefully review the information in this catalog. Some of the factors to be considered when installing a hose assembly are:

- hose elongation or contraction
- proper bend radius/hose routing under pressure
- elbows and adapters to relieve strain
- protection from rubbing or abrasion high temperature sources
- protection against excessive movement
- twisting from pressure spikes/surges

These hose assembly installation factors and the other information in this catalog should be considered by you before installing the hose assembly. If you have any questions regarding proper hose installation, for North America contact Eaton Technical Support 1-888-258-0222 for global support contact your local Eaton technical representative.

### Hose Maintenance

Proper maintenance of the hose is essential to the safe use of the hose and related equipment. Hose should be stored in a dry place. Hose should also be visually inspected. Any hose that has a cut or gouge in the cover that exposes the reinforcement should be retired from service. Hoses should also be inspected for kinking or broken reinforcement. If the outside diameter of the hose is reduced by 20% or more, the hose should be repaired or removed from service. Inadequate attention to hose maintenance may result in hose leakage, bursting, or other failure which may cause serious bodily injury or property damage from spraying fluids, flying projectiles, or other substances.

**WARNING:** Eaton industrial hose, should be used only with compatible/approved fittings and assembly equipment. Do not combine or use Aeroquip or Weatherhead fittings and assembly equipment with each other, i.e. Aeroquip fittings with Weatherhead assembly equipment, or with hose, hose fittings or assembly equipment supplied by another manufacturer. Eaton hereby disclaims any obligation or liability (including incidental and consequential damages) arising from breach or contract, warranty, or tort (under negligence or strict liability theories) should Aeroquip or Weatherhead hose fittings or assembly equipment be used interchangeably or with any fittings or assembly equipment supplied by another manufacturer, or in the event that product instructions for each specified hose assembly are not followed.

# Hose Selection

## Worksheet

Eaton recommends using the STAMPED process to aid in determining the correct hose and coupling for your application. This worksheet is designed to help you organize information for determining

the best hose for a given application. The questions are based on the hose selection factors described earlier in this catalog.

When selecting a hose, always use this worksheet in conjunction with

this catalog. Read all instructions concerning the hose you are selecting. If any questions arise contact Eaton Technical Support at 1-888-258-0222.

### S - Size

(I.D., O.D. and length)

**T - Temperature** of material conveyed and environmental

**A - Application,** the conditions of use

**M - Material** being conveyed, type and concentration

**P - Pressure** to which the assembly will be exposed

**E - Ends;** style, type, orientation, attachment methods, etc.

**D - Delivery** testing, quality, packaging, and delivery requirements

### 1. Size

Flow (cubic feet per minute) requirements? \_\_\_\_\_

See RMA Water Discharge table.

Hose I.D. requirements given the flow requirements? \_\_\_\_\_

Pressure drop? \_\_\_\_\_

Length requirements (excluding hose ends)? \_\_\_\_\_

### 2. Temperature

Temperature range of material to be transferred?

Min. \_\_\_\_\_ Max. \_\_\_\_\_ Average \_\_\_\_\_

Year-round external environment temperature range? \_\_\_\_\_

Cleaning temperature? \_\_\_\_\_

### 3. Application

If the application is new, what service is to be performed? \_\_\_\_\_

If it is an existing application, do not replace a failed hose without finding out the cause of the failure. The hose may have been specified incorrectly originally. Ask the following questions:

What hose was in use? \_\_\_\_\_

Why did it fail? \_\_\_\_\_

How long did the hose last? \_\_\_\_\_

Have the service conditions changed since the failed hose was installed? \_\_\_\_\_

Any movement during loading or unloading process such as flexing or other repetitive motion? \_\_\_\_\_

What other hose conditions exist in addition to the one at the failure point? \_\_\_\_\_

Was hose cleaned and dried prior to transferring the next material? \_\_\_\_\_

Examine other hoses in similar service to avoid unexpected failures. \_\_\_\_\_

### 4. Material: Compatibility & Environment

Internal and external environment consideration. Internal environment relates to the material being conveyed. External environment relates to anything originating from outside the hose.

Check all that apply.

Abrasive materials (conveyants and external)

Petroleum products (aromatics, aliphatics, etc.)

Materials that could cut or gouge hose

Solvents

Ozone

Acids/caustics

Animal fats (oils)

Sparking or flames

Cleaning with steam

Material to be transferred? \_\_\_\_\_

Material concentration (%)? \_\_\_\_\_

What hose cleaning solution(s) will be used? \_\_\_\_\_

- S - Size**  
(I.D., O.D. and length)
- T - Temperature** of material conveyed and environmental
- A - Application,** the conditions of use
- M - Material** being conveyed, type and concentration
- P - Pressure** to which the assembly will be exposed
- E - Ends;** style, type, orientation, attachment methods, etc.
- D - Delivery** testing, quality, packaging, and delivery requirements

**5. Pressure & Suction**

What working pressure is required? \_\_\_\_\_

Are pressure surges involved in this application? How high? \_\_\_\_\_

What safety factor is required? \_\_\_\_\_

Is this a suction application? What vacuum rating is required? \_\_\_\_\_

**6. Ends**

End \_\_\_\_\_

Material \_\_\_\_\_

Attachment Method \_\_\_\_\_

**7. Delivery**

Qty. required \_\_\_\_\_ Date required \_\_\_\_\_ Pkg. requirements \_\_\_\_\_

Testing Required -  No  Yes If Yes, Type: \_\_\_\_\_

Certification Required -  No  Yes If Yes, Type: \_\_\_\_\_

**Special Requirements/Other Information**

Will the selected hose need to possess any of the following features:  
 Branding information needed on the hose? \_\_\_\_\_  
 Color coding? \_\_\_\_\_  
 Any special designations required by agencies or associations? \_\_\_\_\_  
 Will any regulatory agency approvals be required? If yes, which one(s)? \_\_\_\_\_  
 Non-conductive rubber needed to prevent transmittal of electricity? \_\_\_\_\_  
 Static wire or static-dissipating tube to prevent static electricity buildup and discharge sparks? \_\_\_\_\_  
 Pinpricked cover to resist blistering when transferring hot materials or air/gases under pressure? \_\_\_\_\_  
 Abrasion sleeve or guard? \_\_\_\_\_  
 Heat shield? \_\_\_\_\_  
 Sub-zero exposure resistance? \_\_\_\_\_  
 Special assembly requirements? \_\_\_\_\_  
 Continuous transfer service or intermittent service? \_\_\_\_\_  
 Flexibility: Do space restrictions exist where the hose will be used? \_\_\_\_\_  
 Bend Radius: of the hose relative to space in which hose will be used? \_\_\_\_\_  
 Considering the intended use of the hose, how flexible will it need to be (check one)?  
 Extremely flexible       Slightly flexible       Not an issue  
 Weight: How will the hose be handled during use, if all? \_\_\_\_\_  
 How important is the weight of the hose going to be in this application (check one)?  
 Very important       Slightly important       Not an issue

Be sure to reference chemical compatibility recommendations in the Chemical Compatibility Charts starting on page O-1.

If you have any questions, please contact Eaton Technical Support at 1-888-258-0222.

EHA511 Air and Dust Suction	B-29

# Air and Multipurpose

## Introduction and Safety Information

### Every Hose is Easily Identified

- Every foot of hose is easily identified by means of permanent branding. This makes hose selection on the job quicker, easier and safer, and buying hose is easier too—because you can tell at a glance that you're getting exactly the hose you ordered.

### Multi-Purpose Hose for Specialized Uses

- Eaton calls them "MULTIPURPOSE" hoses, meaning they'll do a tremendous variety of jobs. In many cases one Eaton hose can replace several different "special purpose" styles. This helps keep expenses low.

### Brand Name Identity (and the quality that goes behind it)

- With the Eaton brand name on the hose you buy, you are assured maximum value and consistent quality. With over 100 years worth of reputation at stake, we wouldn't have it any other way.

## Air and Multipurpose Hose Safety Information

### Important!

**⚠ WARNING:** Testing can be dangerous and should be done only by trained personnel using proper tools and procedures. Failure to follow such procedures might result in serious injury, death, or damage to property.

**⚠ WARNING:** Failure to properly follow the manufacturer's recommended procedures for the care, maintenance, and storage of a particular hose may result in its failure to perform in the manner intended and may result in serious injury, death, or damage to property.

**⚠ WARNING:** Consult with the Coupling Manufacturer to make sure you choose the correct coupling and proper assembly for the application. Such matching of hose and couplings, and assembling of couplings, should be performed only by trained personnel using proper tools and procedures. Failure to follow manufacturer's instructions or failure to use trained personnel may result in serious bodily injury and/or property damage.

**⚠ WARNING:** Never use a hose to transfer material it is not specifically meant to transfer. Doing so could deteriorate the hose and result in leaking, hose bursting, or end blow-offs. This could lead to serious personal injury or death. Always transfer material in a hose that is designed specifically to transfer that material. This information is listed in this catalog.

**⚠ WARNING:** Consider both working pressure and pressure surges when determining "maximum" pressure. Failure to select a hose that meets both these requirements could lead to end blowoffs, hose leakage, and hose bursting. The result could be serious injury or death. The Eaton hose you choose must meet or exceed the required working pressure, and must have a safety factor to allow for surge pressure.

**⚠ WARNING:** Be aware that if you replace a hose with one having a different I.D. than the original hose, material velocity could increase or decrease, possibly creating static electricity. This could lead to an explosion causing serious injury or death.

**⚠ WARNING:** Selection of the proper hose for the application is essential to the proper operation and safe use of the hose and related equipment. Inadequate attention to selection of hose for the application can result in serious bodily injury or property damage. In order to avoid serious bodily injury or property damage resulting from selection of the wrong hose, you should carefully review the information in this catalog.

# Air and Multipurpose

## High Pressure

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### H6009

### BULLDOG GOLD™

#### Construction:

**Tube:** Nitrile (RMA Class A)

#### Reinforcement:

1.00" - 1.25" 1-wire braid  
1.50" - 3.00" 2-wire braid  
4.00" 3-wire braid

**Cover:** Pin-pricked carboxylated nitrile

#### Operating Temperature:

-40°C to +121°C  
(-40°F to +250°F)

#### Application:

- Provide power to air-operated construction equipment
- Power air-operated drills, boring, and mining equipment

#### Markets:

- Construction
- Mining
- Oil and gas exploration
- Water drilling
- Ship building

#### Type of Couplings:

- "U" Series
- TTC
- Union
- Boss male
- Ground joint female
- Air hammer
- Air king
- Hansen® quick connect

# Air and Multipurpose

## High Pressure Air

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### H9622

### CONTRACTORS AIR™

#### Construction:

**Tube:** Nitrile (RMA Class A)

#### Reinforcement:

0.50" – 1.25" 1-wire braid  
1.50" – 3.00" 2-wire braid

**Cover:** Pin-pricked neoprene

#### Operating Temperature:

-40°C to +100°C  
(-40°F to +212°F)

#### Application:

- Power operated drills, boring, and mining equipment
- Provide power to air-operated equipment

#### Markets:

- Oil and gas exploration
- Metal working
- Construction
- Mining

#### Type of Couplings:

- "U" Series
- "Z" Series
- Boss
- Ground joint
- Air hammer
- Air king
- Hansen® quick connect

Contact coupling manufacturer for attachment procedure and other coupling recommendations

## Low Working Pressure

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### H115 & H116

### PERFORMER II™

#### Construction:

**Tube:** Nitrile (RMA Class B)

#### Reinforcement:

H115 - 2 fiber braid  
H116 - 1 fiber braid

**Cover:** Vinyl nitrile

#### Operating Temperature:

-40°C to +82°C  
(-40°F to +180°F)

#### Application:

- High oil-resistant
- Air and water transfer
- Provide power to operated equipment
- Pneumatic tools on production line

#### Markets:

- Construction
- Forest industry
- Metal working
- Oil and gas exploration
- In-plant service
- Plastic molding
- Ship building

#### Type of Couplings:

- "U" Series
- TTC
- "Z" Series
- Boss
- Ground joint
- Hansen® quick connect

# Air and Multipurpose

## General Air and Water

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### H1981 & H1982

### MARATHONER™ - Non-Conductive

#### Construction:

**Tube:** Nitrile blend

**Reinforcement:** 2- or 4-fiber spiral

**Cover:** Pin-pricked nitrile blend

#### Operating Temperature:

-40°C to +82°C  
(-40°F to +180°F)

#### Application:

- Medium oil-resistant
- Air and water transfer

#### Markets:

- Construction
- Mining
- Paper industry
- Oil and gas exploration
- In-plant service

#### Type of Couplings:

- "U" Series
- TTC
- "Z" Series
- Boss
- Ground joint
- Air hammer
- Air king
- Hansen® quick connect

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### H0105

### BOSFLEX™ A/W

#### Construction:

**Tube:** EPDM

**Reinforcement:** 4-fiber spiral, -20 & -25 2 fiber braid

**Cover:** EPDM

#### Operating Temperature:

-40°C to +82°C  
(-40°F to +180°F)

#### Application:

- Air and water transfer
- Spraying and conveying water based liquid fertilizers and pesticides

#### Markets:

- Construction
- Mining
- Rental industry
- Oil and gas exploration
- In-plant air service
- Agriculture
- Assembly/manufacturers
- Paper/pulp
- Ship building

#### Type of Couplings:

- "U" Series
- Barbed inserts
- Quick disconnect
- Hansen® quick connect

## EHW028

## Heavy Duty MSHA Mine Spray

### Construction:

**Tube:** Oil-mist resistant NRB rubber

**Reinforcement:** High-tensile steel wire

**Cover:** MSHA pin-pricked neoprene

### Operating Temperature:

-35°C to +100°C  
(-31°F to +212°F)

### Application:

- High pressure air in mines

### Markets:

- Mining
- Construction
- Equipment rental

### Type of Couplings:

- Male NPT
- Hansen® quick connect

Contact coupling manufacturer for attachment procedure and other coupling recommendations

# Air and Multipurpose

## Specialty

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### H1571

### Mineforce

#### Construction:

**Tube:** Modified vinyl

#### Reinforcement:

4 fiber spiral

**Cover:** PVC/nitrile blend

#### Application:

- For transfer of air and water
- For high pressure air tools

#### Markets:

- Construction
- Mining
- Food processing

#### Type of Couplings:

- “U” Series
- “Z” Series
- Long shank
- Hansen® quick connect

Contact coupling manufacturer for attachment procedure and other coupling recommendations

#### Operating Temperature:

-28°C to +66°C  
(-20°F to +150°F)

## EHA511

## Air and Dust Suction

### Construction:

**Tube:** Natural and synthetic rubber

**Reinforcement:** Synthetic textile and steel helical wire

**Cover:** Corrugated synthetic rubber

### Application:

- For suction and discharge of air, dust, grain, powder, etc.

### Markets:

- Construction
- In-plant service

### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

# Cement, Plaster and Grout

## Introduction and Safety Information

### Environmental Resistance

- The tube and cover materials of the Eaton industrial hose are designed to assure maximum life and top value. They are sophisticated hoses for demanding jobs.

### Built to Make Work Faster, Easier and Safer

- Moving and connecting hose several times a day isn't easy work. Each of the industrial hose is designed to be as easy to handle as safety and job performance will allow.

### Honest Value

- There is only one way to make hose cost less — build it cheaper. You won't find compromises in the industrial hose. That's why we put the Eaton brand name on them.

### Job Related Construction Service

- Eaton makes a variety of hose styles for material handling applications. Each product is manufactured utilizing the components and construction which make it best suited for the job to be performed.

## Cement, Plaster and Grout Hose Safety Information

### Important!

**⚠ WARNING:** Testing can be dangerous and should be done only by trained personnel using proper tools and procedures. Failure to follow such procedures might result in serious injury, death, or damage to property.

**⚠ WARNING:** Failure to properly follow the manufacturer's recommended procedures for the care, maintenance, and storage of a particular hose may result in its failure to perform in the manner intended and may result in serious injury, death, or damage to property.

**⚠ WARNING:** Consult with the Coupling Manufacturer to make sure you choose the correct coupling and proper assembly for the application. Such matching of hose and couplings, and assembling of couplings, should be performed only by trained personnel using proper tools and procedures. Failure to follow manufacturer's instructions or failure to use trained personnel may result in serious bodily injury and/or property damage.

**⚠ WARNING:** Never use a hose to transfer material it is not specifically meant to transfer. Doing so could deteriorate the hose and result in leaking, hose bursting, or end blow-offs. This could lead to serious personal injury or death. Always transfer material in a hose that is designed specifically to transfer that material. This information is listed in this catalog.

**⚠ WARNING:** Consider both working pressure and pressure surges when determining "maximum" pressure. Failure to select a hose that meets both these requirements could lead to end blowoffs, hose leakage, and hose bursting. The result could be serious injury or death. The Eaton hose you choose must meet or exceed the required working pressure, and must have a safety factor to allow for surge pressure.

**⚠ WARNING:** Do not use hose at temperatures that exceed the hose temperature rating. Doing so could deteriorate the hose, leading to leaks, hose bursting, and end blow-offs. This could result in serious personal injury, or death.

# Cement, Plaster and Grout

## Cement and Concrete

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHK008

### Concrete Vibration

#### Construction:

**Tube:** Synthetic rubber

**Reinforcement:** High-tensile synthetic textile

**Cover:** Synthetic rubber

#### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

#### Application:

- For submerged vibrators
- For use to help prevent air bubbles in concrete liquid projected by hand vibrating

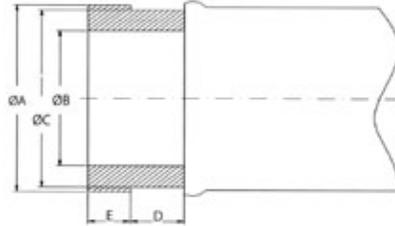

#### Markets:

- Construction
- Cement
- Swimming pool

## Dry Bulk

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHK004

### Channeled Dry Bulk Suction and Discharge

#### Construction:

**Tube:** Natural rubber

**Reinforcement:** High-tensile synthetic textile with helical wire and anti-static copper wire

**Cover:** Channeled synthetic rubber

#### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

#### Application:

- For suction and discharge of dry bulk materials, sand, gravel, dry cement

#### Markets:

- Construction
- Cement
- Swimming pool

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EHK003

### Corrugated Dry Bulk Suction and Discharge

#### Construction:

**Tube:** Natural rubber

**Reinforcement:** High-tensile synthetic textile with helical wire and anti-static copper wire

**Cover:** Corrugated synthetic rubber

#### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

#### Application:

- For suction and discharge of dry bulk materials, sand, gravel, dry cement

#### Markets:

- Construction
- Cement
- Swimming pool

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### Remove the Guesswork from Selecting, Buying and Using Critical Application Hose

- When you're handling easily contaminated or hazardous material it is critical to select the proper hose. The high visibility branding and color coding removes the guess work for hose selection.

### Environmental Resistance

- The tube and cover materials of Eaton Industrial hose products are designed to assure maximum hose life at a superior value to the customer. Specialty service Eaton hoses are sophisticated transfer products for demanding jobs. Exceptional aging, weathering and heat resistant properties keep the hose flexible and easy to use.

### Built to Make Work Faster, Easier and Safer

- Moving and connecting hose several times a day isn't easy work. Each of the industrial hose is designed to be easy to handle as safety and job performance will allow.

### Honest Value

- There is only one way to make hose cost less— build it cheaper. You won't find compromises in the industrial hose. That's why we put the Eaton brand name on them.

## Chemical Hose Safety Information

### Important!

**⚠ WARNING:** A failure of chemical hose in service can result in serious injury, death, or damage to property.

All chemical hose manufacturers recommend specific hose constructions to handle various chemicals.

IF AFTER CAREFUL REVIEW OF THE CHEMICAL RESISTANCE CHART FOUND IN THIS CATALOG, YOU HAVE ANY QUESTIONS ABOUT PROPER SELECTION OF THE HOSE, DO NOT USE OR RECOMMEND THE HOSE WITHOUT FIRST CONSULTING EATON FOR TECHNICAL ASSISTANCE. IF YOU DO NOT HAVE A MOST RECENT COPY, CONTACT CUSTOMER SUPPORT AT 1-888-258-0222. FOR GLOBAL SUPPORT, CONTACT YOUR LOCAL EATON REPRESENTATIVE.

The chemical resistance chart lists the more commonly used materials, chemicals, solvents, oils, etc. The recommendations are based on room temperature and pressure conditions normally recommended for the particular type of hose being used. Where conditions beyond this can be met readily, they have been so indicated; where conditions are not normal and cannot be readily met, Eaton should always be consulted. The chart does not imply conformance to the Food & Drug Administration requirements or Federal or State Laws when handling food products. The list of chemicals is offered as a guide to the chemical resistance properties of the tube material of the hoses shown. It should be used as a guide only, as the degree of resistance of any elastomer with a particular fluid depends upon such variables

as temperature, concentration, pressure conditions, velocity of flow, duration of exposure, aeration, stability of the fluid, etc. Therefore, when in doubt, it is advisable not to use the hose and you should contact your Eaton representative for assistance. Do not use chemical hose at temperatures or pressures above those recommended by the manufacturer. All operators must be thoroughly trained in the care and use of this hose and must at all times wear protective clothing. A hose or system failure could cause the release of a poisonous, corrosive or flammable material.

**⚠ WARNING:** If cover blisters exist, be careful not to pop them. If the hose was damaged in such a way that material was allowed to leak between the cover and inner tube, the blisters may contain this material. If the material is hazardous and splatters when the blisters are popped, it could cause serious physical injury.

**⚠ WARNING:** Failure to properly follow the manufacturer's recommended procedures for the care, maintenance, and storage of a particular hose may result in its failure to perform in the manner intended and may result in serious injury, death, or damage to property.

**⚠ WARNING:** Testing can be dangerous and should be done only by trained personnel using proper tools and procedures. Failure to follow such procedures might result in serious injury, death, or damage to property.

### Chemical Service Hose Maintenance, Testing and Inspection

#### Foreword

The object of the following procedures is to detect any weakness in a hose assembly before the weakness causes failure of a hose in service. While these testing and inspection procedures may be applied to any hose, the periodic testing and inspection procedures outlined herein are mandatory for all hoses.

Rules for proper selection, handling, use and storage of hose are to be carefully followed. It is imperative that hose, while in storage or in service, not be subjected to any form of abuse such as kinking, exposure to an environment involving extremes of temperature, corrosive or oxidizing fumes or liquids, oils and solvents, ozone, etc. The procedures outlined in the ARPM Hose Handbook, Chapter IX, Care, Maintenance and Storage of Hose should be followed carefully.

#### Scope

This procedure is intended as a guide for the inspection, maintenance, and testing of chemical hose. It covers hose containing carcass reinforcements of woven fiber fabric; fiber cords; fiber or wire braids; flat, oval or round wire helix; spiral wire or cable; or any combinations of these reinforcements. Chemical hose is available with various types of ends or, where specified, suitable metal fittings.

#### Handling

Crushing or kinking of the hose can cause severe damage to the reinforcement. Care should be exercised to prevent mishandling.

Do not drag the hose or lift large bore hose from the middle of its length with the ends hanging down. Limit the curvature of the hose to the bend radius recommended by the manufacturer and avoid sharp bends at the end fittings and at manifold connections.

#### Operation

**Important:** Personnel involved in an operation using chemical hose must use safety precautions such as wearing eye or face protection, rubber gloves, boots, and other types of protective clothing.

Pressures and temperatures are to be monitored to see that the hose is not exposed to conditions above specified limits. Exceeding specified limits could injure the hose and result in damage to property and serious bodily harm.

Never allow chemicals to drip on the exterior of a hose or allow hose to lay in a pool of chemicals since the hose cover may not have the chemical resistance of the tube. Should a corrosive material come in contact with the reinforcing material, early failure could result.

If kinking or crushing occurs, examine the hose carefully, and, if the outside diameter is reduced 5% to 20%, the hose must be immediately subjected to the Hydrostatic Pressure Test and Examination. If the reduction in diameter is more than 20%, retire the hose from service.

Care must be taken when different chemicals are conveyed in the same hose; the chemicals may react and shorten the service life of the hose. When it is impractical to disconnect the hose line after use, drain any remaining chemical from the hose.

#### Storage

Before placing chemical hose in storage, the hose must be completely drained and any potentially explosive vapors or corrosive residues flushed out.

**⚠ WARNING:** EXTREME CARE MUST BE TAKEN WHEN FLUSHING OUT A CHEMICAL HOSE WITH WATER; SOME CHEMICALS, SUCH AS CONCENTRATED ACIDS, MAY REACT WITH WATER AND CAUSE SPATTERING WHICH COULD RESULT IN SERIOUS INJURY TO EYES OR OTHER AREAS OF THE BODY.

When flushing a hose, disposal of the effluent must be made in such a manner that environmental problems are not created.

Chemical hose should be stored so that air can circulate through it. This procedure helps extend the life of the hose. Hose should be stored in a cool, dark, dry place at a temperature less than 100°F (38°C).

Frequency of Inspection and Pressure Testing When chemical hose is used in bulk transfer service, it shall be visually inspected daily and hydrostatically tested every 90 days. The details of the examination and testing are listed in this catalog. An inspection card and recording system should be adopted for chemical hose used in dock applications.

**⚠ WARNING:** Consult with the coupling manufacturer to make sure you choose the correct coupling and proper assembly for the application. Such matching of hose and couplings, and assembling of couplings, should be performed only by trained personnel using proper tools and procedures. Failure to follow manufacturer's instructions or failure to use trained personnel may result in serious bodily injury and/or property damage.

**⚠ WARNING:** Never use a hose to transfer material it is not specifically meant to transfer. Doing so could deteriorate the hose and result in leaking, hose bursting, or end blow-offs. This could lead to serious personal injury or death. Always transfer material in a hose that is designed specifically to transfer that material. This information is listed in this catalog.

**⚠ WARNING:** Kinks can cause hose to burst, leading to bodily harm.

*This information taken from the ARPM, Hose Technical Information Sub Committee, IP-11-7 Chemical Hose, Copyright 1979, Revised 1987. (202) 682-1338*

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### H0060

### ARMORCAT™ Corrugated Petrochemical

#### Construction:

**Tube:** UHMW-PE  
FDA-approved material

**Reinforcement:** 2-wire braid, dual stainless steel static wire

**Cover:** Corrugated EPDM

#### Operating Temperature:

-43°C to +121°C  
(-45°F to +250°F)

#### Application:

- For transfer of acids, chemicals, solvents, and petroleum products
- Loading and unloading, pumping, suction, or gravity flow discharge

#### Markets:

- Chemical petroleum industry
- In-plant transfers
- Tank truck
- Paper/pulp industry
- Bulk hauling
- Oil and gas exploration

#### Type of Couplings:

- Cam and groove
- Combination nipple
- Male NPT

Contact coupling manufacturer for other coupling recommendations including proper metal selection (stainless, aluminium, brass etc.) and attachment procedure with crimp specifications.

\*Product available in additional colors on a MTO basis

 Elevated temperatures can change chemical resistance ratings. Please refer to the Chemical Compatibility information prior to use. Factors such as concentration, fluid contamination, and extreme temperatures may affect these performance specification. Please consult Eaton catalog or Technical Support for proper application.

### EHC004

### UHMW Suction and Discharge

#### Construction:

**Tube:** UHMW-PE

**Reinforcement:** High-tensile synthetic textile, steel helical wire and anti-static copper wire

**Cover:** EPDM rubber

#### Operating Temperature:

-40°C to +80°C  
(-40°F to +176°F)

#### Application:

- For suction and discharge of chemicals, and solvents

#### Markets:

- Chemical petroleum industry
- In-plant transfers
- Tank truck
- Paper/pulp industry
- Bulk hauling
- Oil and gas exploration

#### Type of Couplings:

- Cam and groove
- Combination nipple
- Male NPT

Contact coupling manufacturer for other coupling recommendations including proper metal selection (stainless, aluminium, brass etc.) and attachment procedure with crimp specifications.

# Chemical

## Suction & Discharge

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### H0661

### COUGAR™ Corrugated

#### Construction:

**Tube:** CPE

**Reinforcement:** 2-ply fiber with helical wire

**Cover:** EPDM

#### Operating Temperature:

-43°C to +135°C  
(-45°F to +275°F)

#### Application:

- For in-plant transfer of chemicals, alcohols, acids and petroleum products

#### Markets:

- In-plant transfers
- Tank truck
- Paper/pulp industry

#### Type of Couplings:

- Cam and groove
- Combination nipple
- Male NPT

Contact coupling manufacturer for other coupling recommendations including proper metal selection (stainless, aluminium, brass etc.) and attachment procedure with crimp specifications.

### H8359

### PANTHER™ Chemical

#### Construction:

**Tube:** XLPE

#### Reinforcement:

2-ply fiber with helical wire

**Cover:** EPDM

#### Operating Temperature:

-43°C to +66°C  
(-45°F to +150°F)

#### Application:

- For transfer of acids, chemicals, solvents, and petroleum products

#### Markets:

- Chemical petroleum industry
- In-plant transfers
- Tank truck
- Paper/pulp industry
- Bulk hauling

#### Type of Couplings:

- Cam and groove
- Combination nipple
- Male NPT

Contact coupling manufacturer for other coupling recommendations including proper metal selection (stainless, aluminum, brass etc.) and attachment procedure with crimp specifications.

### EHC003

### Heavy Duty XLPE Suction and Discharge

#### Construction:

**Tube:** XLPE

**Reinforcement:** High-tensile synthetic textile, dual steel helical wire and dual anti-static copper wires

**Cover:** CR rubber

#### Operating Temperature:

-40°C to +80°C  
(-40°F to +176°F)

#### Application:

- For suction and discharge of chemicals, and solvents.

#### Markets:

- Chemical petroleum industry
- In-plant transfers
- Tank truck
- Paper/pulp industry
- Bulk hauling
- Oil and gas exploration

#### Type of Couplings:

- Cam and groove
- Combination nipple
- Male NPT

Contact coupling manufacturer for other coupling recommendations including proper metal selection (stainless, aluminium, brass etc.) and attachment procedure with crimp specifications.

- Oil and gas exploration

**Type of Couplings:**

- Cam and groove
- Combination nipple
- Male MPT

Contact coupling manufacturer for other coupling recommendations including proper metal selection (stainless, aluminium, brass etc.) and attachment procedure with crimp specifications.

### EHC011

### Heavy EPDM Suction and Discharge

#### Construction:

**Tube:** EPDM rubber  
**Reinforcement:** High-tensile synthetic textile, dual steel helical wires and anti-static copper wire  
**Cover:** CR rubber

#### Operating Temperature:

-40°C to +120°C  
 (-40°F to +248°F)

#### Application:

- For suction and discharge of chemicals, and solvents

#### Markets:

- Chemical petroleum industry
- In-plant transfers
- Tank truck
- Paper/pulp industry
- Bulk hauling
- Oil and gas exploration

#### Type of Couplings:

- Cam and groove
- Combination nipple
- Male NPT

Contact coupling manufacturer for other coupling recommendations including proper metal selection (stainless, aluminium, brass etc.) and attachment procedure with crimp specifications.

### H0345

### TIGER™ Acid Suction

#### Construction:

**Tube:** EPDM

#### Reinforcement:

2-ply fiber with helical wire

**Cover:** EPDM

#### Operating Temperature:

-43°C to +82°C  
(-45°F to +180°F)

#### Application:

- For transfer of acids, chemicals, solvents, and petroleum products
- Loading and unloading, pumping, suction, or gravity flow discharge

#### Markets:

- Chemical petroleum industry
- In-plant transfers
- Tank truck
- Paper/pulp industry
- Bulk hauling
- Oil and gas exploration

#### Type of Couplings:

- Cam and groove
- Combination nipple
- Male NPT

Contact coupling manufacturer for other coupling recommendations including proper metal selection (stainless, aluminium, brass etc.) and attachment procedure with crimp specifications.

 Elevated temperatures can change chemical resistance ratings. Please refer to the Chemical Compatibility information prior to use. Factors such as concentration, fluid contamination, and extreme temperatures may affect these performance specification. Please consult Eaton catalog or Technical Support for proper application.

### EHC009

### Corrugated EPDM Suction and Discharge

#### Construction:

**Tube:** EPDM rubber

**Reinforcement:** High-tensile synthetic textile, steel helical wire and anti-static copper wire

**Cover:** Corrugated EPDM rubber

#### Operating Temperature:

-40°C to +120°C  
(-40°F to +248°F)

#### Application:

- For suction and discharge of chemicals, and solvents

#### Markets:

- Chemical petroleum industry
- In-plant transfers
- Tank truck
- Paper/pulp industry
- Bulk hauling
- Oil and gas exploration

#### Type of Couplings:

- Cam and groove
- Combination nipple
- Male NPT

Contact coupling manufacturer for other coupling recommendations including proper metal selection (stainless, aluminium, brass etc.) and attachment procedure with crimp specifications.

\*Product also available in BK-Black and BU-Blue

 Elevated temperatures can change chemical resistance ratings. Please refer to the Chemical Compatibility information prior to use. Factors such as concentration, fluid contamination, and extreme temperatures may affect these performance specification. Please consult Eaton catalog or Technical Support for proper application.

### EHC014

### XLPE Discharge

#### Construction:

**Tube:** XLPE

**Reinforcement:** High-tensile synthetic textile, and anti-static copper wire

**Cover:** EPDM rubber

#### Operating Temperature:

-40°C to +80°C  
(-40°F to +176°F)

#### Application:

- For discharge of chemicals, and solvents

#### Markets:

- Chemical petroleum industry
- In-plant transfers
- Tank truck
- Paper/pulp industry
- Bulk hauling
- Oil and gas exploration

#### Type of Couplings:

- Cam and groove
- Combination nipple
- Male NPT

Contact coupling manufacturer for other coupling recommendations including proper metal selection (stainless, aluminium, brass etc.) and attachment procedure with crimp specifications.

### H9699

### ALLEYCAT™ Hot Liquid

#### Construction:

**Tube:** Synthetic rubber for high temperature

**Reinforcement:** 2-wire braid with anti-static wire

**Cover:** EPDM

#### Operating Temperature:

-40°C to +149°C  
(-40°F to +300°F)

#### Application:

- For in-plant transfer of liquors and cleaning solutions

#### Markets:

- In-plant transfers
- Tank truck
- Paper/pulp industry

#### Type of Couplings:

- Cam and groove
- Combination nipple
- Male NPT

Contact coupling manufacturer for other coupling recommendations including proper metal selection (stainless, aluminium, brass etc.) and attachment procedure with crimp specifications.

### EHC010

### Heavy Duty EPDM Discharge

#### Construction:

**Tube:** EPDM

**Reinforcement:** High-tensile synthetic textile, and dual anti-static copper wire

**Cover:** CR rubber

#### Operating Temperature:

-40°C to +120°C  
(-40°F to +248°F)

#### Application:

- For discharge of chemicals, and solvents

#### Markets:

- Chemical petroleum industry
- In-plant transfers
- Tank truck
- Paper/pulp industry
- Bulk hauling
- Oil and gas exploration

#### Type of Couplings:

- Cam and groove
- Combination nipple
- Male NPT

Contact coupling manufacturer for other coupling recommendations including proper metal selection (stainless, aluminium, brass etc.) and attachment procedure with crimp specifications.

### H0346

### LEOPARD™ Acid Discharge

#### Construction:

**Tube:** EPDM

**Reinforcement:**  
2-ply fiber

**Cover:** EPDM

#### Operating Temperature:

-43°C to +82°C  
(-45°F to +180°F)

#### Application:

- For transfer of acids, chemicals, solvents, and petroleum products
- Loading and unloading, pumping, suction, or gravity flow discharge

#### Markets:

- Chemical petroleum industry
- In-plant transfers
- Tank truck
- Paper/pulp industry
- Bulk hauling
- Oil and gas exploration

#### Type of Couplings:

- Cam and groove
- Combination nipple
- Male NPT

Contact coupling manufacturer for other coupling recommendations including proper metal selection (stainless, aluminium, brass etc.) and attachment procedure with crimp specifications.

# Eaton Industrial Hose Reminder

## Selection of Hose Ends

### Proper Selection of Hose Ends

Selection of the proper Eaton Industrial hose end or coupling is essential to the proper operation and safe use of hose assemblies and related equipment.

Inadequate attention to the selection of the end fittings may result in hose leakage, bursting, or other failure which may cause serious bodily injury or property damage from spraying fluids or flying projectiles. In order to avoid serious bodily injury or property damage resulting from selection of an incompatible hose end or coupling, you should carefully review the information in this catalog. Some factors which are involved in selection of the proper hose couplings are:

- Fluid compatibility
- Temperature
- Installation design
- Hose size
- Corrosion requirements
- Fluid conveyed

The given hose and hose end selection factors and the other information contained in this catalog should be considered by you in selecting the proper hose end fitting for your application.

If you have any questions regarding the use of hose/hose ends, for North America contact Eaton Technical Support 1-888-258-0222 for global support contact your local Eaton technical representative.

Contact coupling manufacturer for other coupling recommendations including proper metal selection (stainless, aluminium, brass etc.) and attachment procedure with crimp specifications.

## Introduction and Safety Information

### Remove the Guesswork from Selecting, Buying and Using Critical Application Hose

- When you are handling easily contaminated or hazardous material it is critical to select the proper hose. The high visibility branding and color coding removes the guesswork from hose selection.

### Environmental Resistance

- The tube and cover materials of the Eaton Industrial Hose are designed to assure maximum life and top value. They are sophisticated hoses for demanding jobs.

### Built to Make Work Faster, Easier and Safer

- Moving and connecting hose several times a day isn't easy work. Each of the Industrial Hose is designed to be easy to handle as safety and job performance will allow.

### Honest Value

- There is only one way to make hose cost less — build it cheaper. You won't find compromises in the Industrial Hose. That's why we put the Eaton brand name on them.

## Food and Beverage Hose Safety Information

### Important!

**⚠ WARNING:** Testing can be dangerous and should be done only by trained personnel using proper tools and procedures. Failure to follow such procedures might result in serious injury, death, or damage to property.

**⚠ WARNING:** Failure to properly follow the manufacturer's recommended procedures for the care, maintenance, and storage of a particular hose may result in its failure to perform in the manner intended and may result in serious injury, death, or damage to property.

**⚠ WARNING:** Consult with the coupling manufacturer to make sure you choose the correct coupling and proper assembly for the application. Such matching of hose and couplings, and assembling of couplings, should be performed only by trained personnel using proper tools and procedures. Failure to follow manufacturer's instructions or failure to use trained personnel may result in serious bodily injury and/or property damage.

**⚠ WARNING:** Consider both working pressure and pressure surges when determining "maximum" pressure. Failure to select a hose that meets both these requirements could lead to end blow-offs, hose leakage, and hose bursting. The result could be serious injury or death. The Eaton hose you choose must meet or exceed the required working pressure, and must have a safety factor to allow for surge pressure.

**⚠ WARNING:** Do not use hose at temperatures that exceed the hose temperature rating. Doing so could deteriorate the hose, leading to leaks, hose bursting, and end blow-offs. This could result in serious personal injury or death.

**⚠ WARNING:** Selection of the proper hose for the application is essential to the proper operation and safe use of the hose and related equipment. Inadequate attention to selection of hose for the application can result in serious bodily injury or property damage. In order to avoid serious bodily injury or property damage resulting from selection of the wrong hose, you should carefully review the information in this catalog.

# Food and Beverage

## Food Suction and Discharge

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### H0350

### LION™ Food Transfer

#### Construction:

**Tube:** Vinyl nitrile

**Reinforcement:** 2-ply fiber helical wire

**Cover:** Vinyl nitrile

#### Operating Temperature:

-40°C to +82°C  
(-40°F to +180°F)

#### Application:

- For suction and discharge of non-dairy food products

#### Markets:

- Food processing
- Tank truck
- Rail car

#### Type of Couplings:

- Cam and groove
- Combination nipple

## Food Suction & Discharge

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### H0384

### Grey Food Transfer

#### Construction:

**Tube:** Vinyl nitrile

**Reinforcement:** 2-ply fiber with helical wire

**Cover:** Vinyl nitrile

#### Operating Temperature:

-40°C to +82°C  
(-40°F to +180°F)

#### Application:

- For suction and discharge of bulk abrasive material for food industry

#### Markets:

- Food processing
- Tank truck
- Plastic industry

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EHF002

### Liquid Food Suction and Discharge

#### Construction:

**Tube:** Vegetable oil resistant NBR

**Reinforcement:** High-tensile synthetic textile with a single steel helical wire

**Cover:** Synthetic rubber

#### Operating Temperature:

-40°C to +80°C  
(-40°F to +176°F)

#### Application:

- For suction and discharge of milk, vegetable oil and beverages

#### Markets:

- Food processing
- Tank truck
- Dairy processing
- Milk processing

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

## Food Suction & Discharge

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHF001

### Liquid Food Discharge

#### Construction:

**Tube:** Vegetable oil-resistant NBR

**Reinforcement:** High-tensile synthetic textile

**Cover:** Synthetic rubber

#### Operating Temperature:

-40°C to +80°C  
(-40°F to +176°F)

#### Application:

- Discharge of milk, vegetable oil and beverages

#### Markets:

- Food transfer
- Food tank truck

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EHF021

### Flat Corrugated Alcohol Suction and Discharge

#### Construction:

**Tube:** UHMW-PE

**Reinforcement:** High-tensile synthetic textile with steel helical wire

**Cover:** Flat corrugated synthetic rubber

#### Operating Temperature:

-40°C to +80°C  
(-40°F to +176°F)

#### Application:

- For suction and discharge of food containing high percentage of alcohol

#### Markets:

- Breweries
- Distilleries
- Food processing

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EHB502 & EHB503 Medium Duty Beer/Wine Suction & Discharge

#### Construction:

**Tube:** EPDM rubber

**Reinforcement:** High-tensile synthetic textile with steel helical wire

**Cover:** Synthetic rubber

#### Operating Temperature:

-40°C to +120°C  
(-40°F to +248°F)

#### Application:

- For suction and discharge of beverages such as mineral water, beer, fruit juices, wine and liquor

#### Markets:

- Food processing
- Tank truck
- Breweries
- Distilleries

#### Type of Couplings:

- Cam and groove
- Combination nipple

### EHF007

### Heavy Duty Potable Water Suction and Discharge

#### Construction:

**Tube:** NR

**Reinforcement:** High-tensile synthetic textile with steel helical wire

**Cover:** EPDM rubber

#### Operating Temperature:

-30°C to +70°C  
(-22°F to +158°F)

#### Application:

- For suction and discharge of potable water

#### Markets:

- Food processing
- Tank truck

#### Type of Couplings:

- Cam and groove
- Combination nipple

# Food and Beverage

## Beverage Suction & Discharge

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHF004

### Potable Water Discharge

#### Construction:

**Tube:** Synthetic rubber

**Reinforcement:** High-tensile synthetic textile

**Cover:** Synthetic rubber

#### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

#### Application:

- For discharge of potable water

#### Markets:

- Food transfer
- Food tank truck

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

## Beverage Suction & Discharge

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### H285

### CLEARFORCE™ – R

#### Construction:

**Tube:** Clear PVC

**Reinforcement:** 2-spiral fiber

**Cover:** Clear PVC

#### Operating Temperature:

-26°C to +66°C  
(-15°F to +150°F)

#### Application:

- For food and beverage dispensing
- For spraying and conveying fertilizer and pesticides

#### Markets:

- Food processing
- Agriculture
- In-plant service

#### Type of Couplings:

- “E” Series
- 265 “P” Series
- Barbed inserts

Contact coupling manufacturer for attachment procedure and other coupling recommendations

## Dry Bulk Suction & Discharge

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHF016

### Channeled Bulk Suction and Discharge

#### Construction:

**Tube:** Natural rubber

**Reinforcement:** High-tensile synthetic textile with steel helical wire and anti-static copper wire

**Cover:** Channeled synthetic rubber

#### Operating Temperature:

-40°C to +80°C  
(-40°F to +176°F)

#### Application:

- For suction and discharge of bulk abrasive products such as sugar, flour, milk powder and granules

#### Markets:

- Food processing
- Tank truck

#### Type of Couplings:

- Cam and groove

Contact coupling manufacturer for attachment procedure and other coupling recommendations

## Dry Bulk Suction & Discharge

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHF013

### Bulk Suction and Discharge

#### Construction:

**Tube:** Natural rubber

**Reinforcement:** High-tensile synthetic textile with steel helical wire and anti-static copper wire

**Cover:** Synthetic rubber

#### Operating Temperature:

-40°C to +80°C  
(-40°F to +176°F)

#### Application:

- For suction and discharge of bulk abrasive products such as sugar, flour, milk powder and granules

#### Markets:

- Food processing
- Tank truck

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### H1066

### Creamery/Packing Washdown

#### Construction:

**Tube:** Nitrile

**Reinforcement:** 2-braid fiber

**Cover:** Pin-pricked vinyl nitrile

#### Operating Temperature:

-40°C to +82°C  
(-40°F to +180°F)

#### Application:

- For washdown of food processing facilities and equipment

Not for conveying milk

#### Markets:

- Food processing
- Meat packing and rendering
- Chicken processing
- Dairies
- Canneries
- Syrup manufacturing

#### Type of Couplings:

- Barbed inserts
- “U” series

Contact coupling manufacturer for attachment procedure and other coupling recommendations

# Eaton Industrial Hose Reminder

## Hose Selection

### Selection of hose

Selection of the proper Eaton Industrial hose for an application is essential to the proper operation and safe use of the hose and related equipment. Inappropriate hose selection may result in hose leakage, bursting, or other failure which may cause bodily injury or property damage from spraying fluids or flying projectiles. To avoid serious bodily injury or property damage resulting from selection of the wrong hose, carefully review the information in this catalog. Some of the factors to consider on proper hose selection are known as **STAMPED**:

- S** - **Size**, (I.D., O.D. and length)
- T** - **Temperature** of material conveyed and environmental
- A** - **Application**, the conditions of use
- M** - **Material** being conveyed, type and concentration
- P** - **Pressure** to which the assembly will be exposed
- E** - **Ends**; style, type, orientation, attachment method, etc.
- D** - **Delivery** testing, quality, packaging and delivery requirements

These factors and the supplemental information contained in this catalog should be considered in selecting the proper hose for your application. If you have any questions regarding the proper hose for your application, please contact Eaton for North America, Eaton Technical Support 1-888-258-0222 for global support contact your local Eaton Technical Representative.

# Gaseous Service

## Introduction and Safety Information

### Remove the Guesswork from Selecting, Buying and Using Critical Application Hose

- When you're handling easily contaminated or hazardous material, it is critical to select the proper hose. The high visibility branding and color coding of Eaton removes the guesswork for hose selection.

### Environmental Resistance

- The tube and cover materials of Eaton industrial hose products are designed to assure maximum hose life at a superior value to the customer. Specialty service Eaton hoses are sophisticated transfer products for demanding jobs. Exceptional aging, weathering and heat resistant properties keep the hose flexible and easy to use.

### Permanent Branding for Easy Identification

- The name of the hose and the working pressure are molded into the hose cover can't rub off. This makes hose selection on the job quicker, easier and safer.

### The Eaton Reputation for Quality

- Your assurance of dependable performance.

## Gaseous Hose Safety Information

### Important!

**⚠ WARNING:** Testing can be dangerous and should be done only by trained personnel using proper tools and procedures. Failure to follow such procedures might result in serious injury, death, or damage to property.

**⚠ WARNING:** Failure to properly follow the manufacturer's recommended procedures for the care, maintenance, and storage of a particular hose may result in its failure to perform in the manner intended and may result in serious injury, death, or damage to property.

**⚠ WARNING:** Do not use chemical hose at temperatures or pressures above those recommended by the manufacturer. All operators must be thoroughly trained in the care and use of this hose and must at all times wear protective clothing. A hose or system failure could cause the release of a poisonous, corrosive or flammable material.

**⚠ WARNING:** Consult with the Coupling Manufacturer to make sure you choose the correct coupling and proper assembly for the application. Such matching of hose and couplings, and assembling of couplings, should be performed only by trained personnel using proper tools and procedures. Failure to follow manufacturer's instructions or failure to use trained personnel may result in serious bodily injury and/or property damage.

**⚠ WARNING:** Never use a hose to transfer material it is not specifically meant to transfer. Doing so could deteriorate the hose and result in leaking, hose bursting, or end blow-offs. This could lead to serious personal injury or death. Always transfer material in a hose that is designed specifically to transfer that material. This information is listed in this catalog.

**⚠ WARNING:** Consider both working pressure and pressure surges when determining "maximum" pressure. Failure to select a hose that meets both these requirements could lead to end blow-offs, hose leakage, and hose bursting. The result could be serious injury or death. The Eaton industrial hose you choose must meet or exceed the required working pressure, and must have a safety factor to allow for surge pressure.

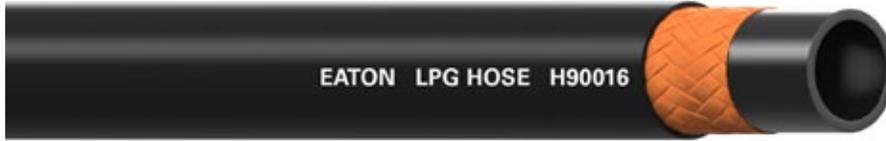

**⚠ WARNING:** Do not use hose at temperatures that exceed the hose temperature rating. Doing so could deteriorate the hose, leading to leaks, hose bursting, and end blow-offs. This could result in serious personal injury or death.

**⚠ WARNING:** Selection of the proper hose for the application is essential to the proper operation and safe use of the hose and related equipment. Inadequate attention to selection of hose for the application can result in serious bodily injury or property damage. In order to avoid serious bodily injury or property damage resulting from selection of the wrong hose, you should carefully review the information in this catalog.

**Not to be used for NH<sub>3</sub>** . Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### H900

### UL LPG

#### Construction:

**Tube:** Nitrile

**Reinforcement:**  
Textile braid

**Cover:** Pin-pricked vinyl nitrile

#### Operating Temperature:

-40°C to +60°C  
(-40°F to +140°F)

**Hose is capable of this rating. LP-Gas should never be elevated above 100°F**

#### Application:

- For transfer and delivery of propane and butane
- Transfer of natural gas in open, well ventilated areas (1 psiG max. working pressure)

#### Markets:

- LPG delivery vehicles
- Petroleum refineries
- Chemical processing
- Tank truck

#### Type of Couplings:

- "U" Series
- Swaged or crimp male couplings

Contact coupling manufacturer for attachment procedure and other coupling recommendations

# Material Handling Service

## Introduction and Safety Information

### Environmental Resistance

- The tube and cover materials of the Eaton industrial hose are designed to assure maximum life and top value. They are sophisticated hoses for demanding jobs.

### Built to Make Work Faster, Easier and Safer

- Moving and connecting hose several times a day isn't easy work. Each of the industrial hose is designed to be easy to handle as safety and job performance will allow.

### Honest Value

- There is only one way to make hose cost less— build it cheaper. You won't find compromises in the industrial hose. That's why we put the Eaton brand name on them.

### Job Related Construction Service

- Eaton makes a variety of hose styles for material handling applications. Each product is manufactured utilizing the components and construction which make it best suited for the job to be performed.

## Material Handling Hose Safety Information

### Important!

**⚠ WARNING:** Testing can be dangerous and should be done only by trained personnel using proper tools and procedures. Failure to follow such procedures might result in serious injury, death, or damage to property.

**⚠ WARNING:** Failure to properly follow the manufacturer's recommended procedures for the care, maintenance, and storage of a particular hose may result in its failure to perform in the manner intended and may result in serious injury, death, or damage to property.

**⚠ WARNING:** Consult with the Coupling Manufacturer to make sure you choose the correct coupling and proper assembly for the application. Such matching of hose and couplings, and assembling of couplings, should be performed only by trained personnel using proper tools and procedures. Failure to follow manufacturer's instructions or failure to use trained personnel may result in serious bodily injury and/or property damage.

**⚠ WARNING:** Never use a hose to transfer material it is not specifically meant to transfer. Doing so could deteriorate the hose and result in leaking, hose bursting, or end blow-offs. This could lead to serious personal injury or death. Always transfer material in a hose that is designed specifically to transfer that material. This information is listed in this catalog.

**⚠ WARNING:** Consider both working pressure and pressure surges when determining "maximum" pressure. Failure to select a hose that meets both these requirements could lead to end blow-offs, hose leakage, and hose bursting. The result could be serious injury or death. The Eaton hose you choose must meet or exceed the required working pressure, and must have a safety factor to allow for surge pressure.

**⚠ WARNING:** Do not use hose at temperatures that exceed the hose temperature rating. Doing so could deteriorate the hose, leading to leaks, hose bursting, and end blow-offs. This could result in serious personal injury or death.

# Material Handling

## Slurry & Abrasive Resistant

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHK015

### Channeled Abrasion Suction & Discharge

#### Construction:

**Tube:** Natural rubber

**Reinforcement:** High-tensile synthetic textile with helical wire and anti-static copper wire

**Cover:** Channeled synthetic rubber

#### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

#### Application:

- For suction and discharge of abrasive powders, dust, granules, sand, gravel and cement

#### Markets:

- Construction
- In-plant transfer
- Tank truck
- Dry cement delivery

#### Type of Couplings:

- Cam and groove
- Combination nipple

# Material Handling

## Slurry and Abrasive Resistant

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHM001

### Corrugated Dry Bulk Suction and Discharge

#### Construction:

**Tube:** Anti-static natural rubber

**Reinforcement:** High-tensile synthetic textile with steel helical wire and anti-static copper wire

**Cover:** Corrugated synthetic rubber

#### Application:

- For suction and discharge of dry bulk materials, sand, gravel and dry cement

#### Markets:

- Construction
- Cement placement

#### Type of Couplings:

- Frame coupling and gaskets

Contact coupling manufacturer for attachment procedure and other coupling recommendations

#### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

### EHK014

### Corrugated Abrasion Suction and Discharge

#### Construction:

**Tube:** Natural rubber

**Reinforcement:** High-tensile synthetic textile with helical wire and anti-static copper wire

**Cover:** Corrugated synthetic rubber

#### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

#### Application:

- For suction and discharge of abrasive powders, dust, granules, sand, gravel and cement

#### Markets:

- Construction
- In-plant transfer
- Tank truck
- Dry cement delivery

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

# Material Handling

## Slurry & Abrasive Resistant

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHK011 Abrasion Gravity Fed

#### Construction:

**Tube:** Natural rubber

#### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

#### Application:

- For discharge of abrasive materials without pressure

#### Markets:

- Construction
- Dry cement delivery

## Dry Bulk

### EHK004

### Channeled Dry Bulk Suction and Discharge

#### Construction:

**Tube:** Natural rubber

**Reinforcement:** High-tensile synthetic textile with helical wire and anti-static copper wire

**Cover:** Channeled synthetic rubber

#### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

#### Application:

- For suction and discharge of dry bulk materials, sand, gravel, dry cement

#### Markets:

- Construction
- Cement
- Swimming pool

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

# Material Handling

## Dry Bulk

### EHK001

### Dry Bulk Discharge

#### Construction:

**Tube:** Natural rubber

**Reinforcement:** High-tensile synthetic textile

**Cover:** Pin-pricked synthetic rubber

#### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

#### Application:

- For discharge of dry cement and abrasive materials

#### Markets:

- Construction
- Cement
- Swimming pool

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### H0347

### WILDCAT™ Dry Material

#### Construction:

**Tube:** Static dissipating natural rubber/SBR

**Reinforcement:** 2-ply fiber with dual helical wires

**Cover:** SBR

#### Operating Temperature:

-23°C to +71°C  
(-10°F to +160°F)

#### Application:

- Transfer of dry bulk
- Discharge of abrasive material
- Transfer of bottle caps
- Transfer of cleaning agents

#### Markets:

- In-plant transfers
- Tank truck
- Bottling plant
- Coal plant
- Dry cement operations
- Well service

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

# Material Handling

## Sandblast

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHC500

### Sandblast – 60mm<sup>3</sup>

#### Construction:

**Tube:** Natural rubber

**Reinforcement:** High-tensile synthetic textile with anti-static copper wire

**Cover:** Pin-pricked natural and synthetic rubber

#### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

#### Application:

- Conveys sand or shot for cleaning purposes
- Conveys sand from sandblast equipment to clean steel or concrete before painting or sealing

#### Markets:

- Construction
- Metal working
- Ship building

#### Type of Couplings:

- Sandblast couplings that attach to the O.D. of hose

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### Proper Hose Handling

Proper hose handling can help preserve hose assembly life and work environment safety. Therefore, consider the following points when handling hose assemblies.

- Avoid crushing or kinking the hose. This can cause severe damage to the reinforcement that isn't always obvious when looking at the cover.
- Do not drag the hose or lift a large bore hose from the middle of its length with the ends hanging down. Doing so can cause kinking, cover cuts, hose reinforcement damage, and coupling damage.
- Limit curvature of the hose to the minimum bend radius recommended by the manufacturer. Also avoid sharp bends at the end fittings and the manifold connections.
- Do not exceed pressure and temperature limits because this could damage the hose and ultimately result in serious bodily injury or property damage. Monitor pressure and temperature during hose use.
- Never allow chemicals, solvents, or any other hazardous materials to drip onto ground. Always comply with environmental laws.
- Never allow chemicals to drip on the exterior of a hose or allow hose to lay in a pool of chemicals. The hose cover may not have the chemical resistance of the tube. If a corrosive material comes into contact with the hose reinforcement, the result could be early hose failure.
- Avoid extreme flexing of the hose near the coupling. If necessary, use elbows in the piping system to assure a straight line connection with the hose.
- Protect hose from heat, flame, cutting and twisting. Use shields or clamps to do this.
- Support hose to avoid mechanical strain on couplings.
- Be aware that dropping or dragging the assembly, chemical incompatibility, exposure to temperature extremes, or extensive internal coupling abrasion can cause leaks and reduce coupling retention.

## Introduction and Safety Information

### Pressure and Vacuum Rated

- Eaton manufactures braided and spiral hoses using the latest technology in wire and synthetic yarns. As a result, Eaton hoses are pressure and vacuum resistant, as well as flexible and easy to handle.

### Quality Assured

- Value through design and quality control assures you of maximum performance from Eaton products.

## Oil and Gas Exploration Hose Safety Information

### Important!

**⚠ WARNING:** Testing can be dangerous and should be done only by trained personnel using proper tools and procedures. Failure to follow such procedures might result in serious injury, death, or damage to property.

**⚠ WARNING:** Failure to properly follow the manufacturer's recommended procedures for the care, maintenance, and storage of a particular hose may result in its failure to perform in the manner intended and may result in serious injury, death, or damage to property.

**⚠ WARNING:** Never use a hose to transfer material it is not specifically meant to transfer. Doing so could deteriorate the hose and result in leaking, hose bursting, or end blow-offs. This could lead to serious personal injury or death. Always transfer material in a hose that is designed specifically to transfer that material. This information is listed in this catalog.

**⚠ WARNING:** Consider both working pressure and pressure surges when determining "maximum" pressure. Failure to select a hose that meets both these requirements could lead to end blow-offs, hose leakage, and hose bursting. The result could be serious injury or death. The Eaton hose you choose must meet or exceed the required working pressure, and must have a safety factor to allow for surge pressure.

**⚠ WARNING:** Do not use hose at temperatures that exceed the hose temperature rating. Doing so could deteriorate the hose, leading to leaks, hose bursting, and end blow-offs. This could result in serious personal injury or death.

**⚠ WARNING:** Selection of the proper hose for the application is essential to the proper operation and safe use of the hose and related equipment. Inadequate attention to selection of hose for the application can result in serious bodily injury or property damage. In order to avoid serious bodily injury or property damage resulting from selection of the wrong hose, you should carefully review the information in this catalog.

## Frac and Well Service

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

**EHP001**

**BLACK CAT™ FRAC**

**Construction:**

**Tube:** Nitrile blend (RMA Class A)

**Reinforcement:** 4-ply polyester fabric

**Cover:** Bruiser™ abrasion resistant cover

**Operating Temperature:**

-40°C to +93°C  
(-40°F to +200°F)

**Application:**

- Petroleum based fluids, non-potable and salt water, fracturing solutions, and slurries

**Markets:**

- Oil and gas exploration
- Well service
- Fracking industry

**Type of Couplings:**

- King crimp style combination nipples
- One-piece hammer union frac fitting

### H0377

### Kelly Power Drilling Hose

#### Construction:

**Tube:** Nitrile/Hypalon blend

**Reinforcement:**  
4-spiral wire

**Cover:** Neoprene

#### Operating Temperature:

-40°C to +121°C  
(-40°F to +250°F)

#### Application:

- Rotary drilling on portable drilling rigs, work over rigs and slim hole rigs

#### Markets:

- Oil and gas exploration
- Well service
- Fracking industry

#### Type of Couplings:

- 430 "U" Series
- Unions
- Boss male

### EHM005

### Hard Wall Material Handling Suction and Discharge

#### Construction:

**Tube:** Natural rubber

**Reinforcement:** High-tensile synthetic textile with helical wire and anti-static copper wire

**Cover:** EPDM

#### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

#### Application:

- For suction and discharge of abrasive materials including barite bentonite

#### Markets:

- Construction
- In-plant transfer
- Tank truck
- Bottling plant
- Coal plant
- Well service
- Oil and gas exploration

### EHP005

### Hard Wall Oilfield Oil/Fuel Suction and Discharge

#### Construction:

**Tube:** NBR

**Reinforcement:** High-tensile synthetic textile and anti-static copper wire

**Cover:** CR rubber

#### Operating Temperature:

-35°C to +80°C  
(-31°F to +176°F)

#### Application:

- For suction and discharge of heavy-duty petroleum products

For use with petroleum products with aromatic content up to 50%

#### Markets:

- Oil rig platform
- Tankers
- Barges
- Oil and gas exploration

#### Type of Couplings:

- Cam and groove
- Combination nipple

# Oil and Gas Exploration

## Suction and Discharge

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHP002

### Oilfield Mud Suction and Discharge

#### Construction:

**Tube:** Synthetic and natural rubber blend

**Reinforcement:** High-tensile synthetic textile and a single steel helical wire available on smaller sizes and dual helical wires available for 8.00" through 12.00"

**Cover:** EPDM blend

#### Operating Temperature:

-25°C to +70°C  
(-13°F to +158°F)

#### Application:

- For transfer applications such as drilling mud

Not recommended for refined petroleum products

#### Markets:

- Oil and gas exploration
- Well service
- Fracking industry

#### Type of Couplings:

- Cam and groove
- Male NPT
- Unions

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EHM004

### Soft Wall Material Handling Discharge

#### Construction:

**Tube:** Natural rubber

**Reinforcement:** High-tensile synthetic textile and anti-static copper wire

**Cover:** EPDM

#### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

#### Application:

- For discharge of abrasive materials including barite bentonite

#### Markets:

- Construction
- In-plant transfer
- Tank truck
- Bottling plant
- Coal plant
- Well service
- Oil and gas exploration

#### Type of Couplings:

- Cam and groove
- Combination nipple

### Heavy Duty Oilfield Liquid Mud Discharge

#### Construction:

**Tube:** Synthetic rubber

**Reinforcement:** High-tensile synthetic textile with and antistatic copper wire

**Cover:** CR rubber

#### Operating Temperature:

-35°C to +80°C  
(-31°F to +176°F)

#### Application:

- For discharge of high pressure liquid mud, mineral oils, etc.

#### Markets:

- Oil rig platform
- Oil and gas exploration

#### Type of Couplings:

- Cam and groove

### Environmental Resistance

- The tube and cover materials of the Eaton industrial hose are designed to assure maximum life and top value. They are sophisticated hoses for demanding jobs.

### Remove the Guesswork from Selecting, Buying and Using Critical Application Hose

- When you are handling hazardous material, it is critical to select the proper hose. Eaton products' high visibility branding and color coding removes the guesswork for hose selection.

### Built to Make Work Faster, Easier and Safer

- Moving and connecting hose several times a day isn't easy work. Each of the industrial hose is designed to be easy to handle as safety and job performance will allow.

### The Eaton Reputation for Quality

- Your assurance of dependable performance.

## Petroleum Service Hose Safety Information

### Important!

**⚠ WARNING:** Testing can be dangerous and should be done only by trained personnel using proper tools and procedures. Failure to follow such procedures might result in serious injury, death, or damage to property.

**⚠ WARNING:** Failure to properly follow the manufacturer's recommended procedures for the care, maintenance, and storage of a particular hose may result in its failure to perform in the manner intended and may result in serious injury, death, or damage to property.

**⚠ WARNING:** Consult with the Coupling Manufacturer to make sure you choose the correct coupling and proper assembly for the application. Such matching of hose and couplings, and assembling of couplings, should be performed only by trained personnel using proper tools and procedures. Failure to follow manufacturer's instructions or failure to use trained personnel may result in serious bodily injury and/or property damage.

**⚠ WARNING:** Never use a hose to transfer material it is not specifically meant to transfer. Doing so could deteriorate the hose and result in leaking, hose bursting, or end blow-offs. This could lead to serious personal injury or death. Always transfer material in a hose that is designed specifically to transfer that material. This information is listed in this catalog.

**⚠ WARNING:** If cover blisters exist, be careful not to pop them. If the hose was damaged in such a way that material was allowed to leak between the cover and inner tube, the blisters may contain this material. If the material is hazardous and splatters when the blisters are popped, it could cause serious physical injury.

**⚠ WARNING:** Kinks can cause hose to burst, leading to bodily harm.

### EHJ001

### Aircraft Refueling Discharge – Type B

#### EN1361 Type B

#### Construction:

**Tube:** Conductive NBR rubber

**Reinforcement:** High-tensile synthetic textile braid and anti-static wire

**Cover:** Synthetic rubber

#### Operating Temperature:

-30°C to +65°C  
(-22°F to +149°F)

#### Application:

- For ground refueling of aircraft

For use with petroleum products with aromatic content up to 30%

#### Markets:

- Aircraft refueling

#### Type of Couplings:

- API couplings

### EHJ003

## Aircraft Refueling Suction and Discharge – Type E

### EN1361 Type E

#### Construction:

**Tube:** Nitrile blend

**Reinforcement:** High-tensile synthetic textile with a dual steel helical wire for smaller sizes and dual helical wire and dual antistatic copper wire

**Cover:** Synthetic rubber

#### Operating Temperature:

-30°C to +65°C  
(-22°F to +149°F)

#### Application:

- For ground refueling and fuel discharge of aircraft

For use with petroleum products with aromatic content up to 30%

#### Markets:

- Aircraft refueling

#### Type of Couplings:

- API couplings

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EHP506 & EHP507 Light Duty Dock Oil Suction and Discharge EN1765 Type S

#### Construction:

**Tube:** NBR

**Reinforcement:** High-tensile synthetic textile dual steel helical wire and antistatic copper wire

**Cover:** Synthetic rubber

#### Operating Temperature:

-30°C to +82°C  
(-50°F to +180°F)

#### Application:

- For suction & discharge of petroleum products from tankers and barges bunkering services

For use with petroleum products with aromatic content up to 50%

#### Markets:

- Petroleum industry
- Tankers
- Barges

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EHP511

### Petroleum Dispensing

#### Construction:

**Tube:** Nitrile

**Reinforcement:** 1-wire braid

**Cover:** Synthetic rubber

#### Operating Temperature:

-40°C to +85°C  
(-40°F to +185°F)

#### Application:

- For gasoline dispensing

#### Markets:

- Petroleum industry
- Oil and gas exploration
- Ship building

#### Type of Couplings:

- Male NPT

### EHP522

### Heavy Duty Petroleum/Oil Suction and Discharge

#### Construction:

**Tube:** Nitrile

**Reinforcement:** High-tensile synthetic textile with helical wire and anti-static copper wire

**Cover:** Synthetic rubber (RMA Class A)

#### Operating Temperature:

-35°C to +70°C  
(-31°F to +158°F)

#### Application:

- For high-pressure petroleum suction and discharge

For use with petroleum products with aromatic content up to 50%

#### Markets:

- Tank truck
- Paper/pulp industry
- Oil exploration
- Ship building
- Batch plants

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EHP516

### Petroleum/Oil Suction and Discharge EN1761 Type SD

#### Construction:

**Tube:** NBR

**Reinforcement:** High-tensile synthetic textile dual steel helical wires and dual anti-static copper wires

**Cover:** Synthetic rubber

#### Operating Temperature:

-30°C to +70°C  
(-22°F to +158°F)

#### Application:

- For suction and discharge of petroleum products

For use with petroleum products with aromatic content up to 50%

#### Markets:

- Petroleum industry
- Paper/pulp industry
- Oil and gas exploration
- Ship building
- Tank trucks
- Waste hauling

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EHP505

### Channeled Petroleum/Oil Suction and Discharge

#### Construction:

**Tube:** NBR

**Reinforcement:** High-tensile synthetic textile dual steel helical wires and dual anti-static copper wire

**Cover:** Channeled synthetic rubber

#### Operating Temperature:

-30°C to +70°C  
(-22°F to +158°F)

#### Application:

- For suction and discharge of petroleum

For use with petroleum products with aromatic content up to 50%

#### Markets:

- Petroleum industry
- Paper/pulp industry
- Oil and gas exploration
- Ship building
- Tank trucks
- Waste hauling

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EHP503

### Flat Corrugated Tank Truck

#### Construction:

**Tube:** Nitrile blend

**Reinforcement:** High-tensile synthetic textile with a single steel helical wire and anti-static copper wire

**Cover:** Flat corrugated synthetic blend

#### Operating Temperature:

-35°C to +70°C  
(-31°F to +158°F)

#### Application:

- For suction and discharge of petroleum products

#### Markets:

- Petroleum industry
- Paper/pulp industry
- Oil and gas exploration
- Ship building
- Tank trucks
- Waste hauling

#### Type of Couplings:

- Cam and groove
- Combination nipple

### EHP513

### Petroleum/Oil Discharge EN 1360 Type 1

#### Construction:

**Tube:** NBR

**Reinforcement:** High-tensile synthetic textile and dual anti-static copper wire

**Cover:** Synthetic rubber

#### Operating Temperature:

-30°C to +70°C  
(-22°F to +158°F)

#### Application:

- For discharge of petroleum products

For use with petroleum products with aromatic content up to 50%

#### Markets:

- Petroleum industry
- Paper/pulp industry
- Oil and gas exploration
- Ship building
- Tank trucks
- Waste hauling

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### High Pressure Petroleum Discharge

#### Construction:

**Tube:** Nitrile

**Reinforcement:** High-tensile synthetic textile and anti-static copper wire

**Cover:** Synthetic rubber

#### Operating Temperature:

-35°C to +70°C  
(-31°F to +158°F)

#### Application:

- For discharge of petroleum products

For use with petroleum products with aromatic content up to 50%

#### Markets:

- Petroleum industry
- Paper/pulp industry
- Oil and gas exploration
- Ship building
- Tank trucks
- Waste hauling

#### Type of Couplings:

- Cam and groove
- Combination nipple

### H901

### Boston Bull Dog Fuel Oil

#### Construction:

**Tube:** Nitrile rubber (RMA Class A)

**Reinforcement:** Double fiber braid

**Cover:** Vinyl nitrile rubber

#### Operating Temperature:

-40°C to +82° C  
(-40°F to +180°F)

#### Application:

- For fuel oil transfer for residential and/or commercial delivery

#### Markets:

- Tank truck
- Petroleum refining
- Chemical processing
- Home delivery of fuel

#### Type of Couplings:

- Reattachable
- Internally expanded permanent attached

## Introduction and Safety Information

### Remove the Guesswork from Selecting, Buying and Using Critical Application Hose

- When you're handling easily contaminated or hazardous material, it is critical to select the proper hose. The high visibility branding and color coding of Eaton removes the guesswork for hose selection.

### Environmental Resistance

- The tube and cover materials of Eaton industrial hose products are designed to assure maximum hose life at a superior value to the customer. Specialty service Eaton hoses are sophisticated transfer products for demanding jobs. Exceptional aging, weathering and heat resistant properties keep the hose flexible and easy to use.

### Permanent Branding for Easy Identification

- The name of the hose and the working pressure are molded into the hose cover can't rub off. This makes hose selection on the job quicker, easier and safer.

### The Eaton Reputation for Quality

- Your assurance of dependable performance.

## Specialty Service Hose Safety Information

### Important!

**⚠ WARNING:** Testing can be dangerous and should be done only by trained personnel using proper tools and procedures. Failure to follow such procedures might result in serious injury, death, or damage to property.

**⚠ WARNING:** Failure to properly follow the manufacturer's recommended procedures for the care, maintenance, and storage of a particular hose may result in its failure to perform in the manner intended and may result in serious injury, death, or damage to property.

**⚠ WARNING:** Do not use chemical hose at temperatures or pressures above those recommended by the manufacturer. All operators must be thoroughly trained in the care and use of this hose and must at all times wear protective clothing. A hose or system failure could cause the release of a poisonous, corrosive or flammable material.

**⚠ WARNING:** Consult with the Coupling Manufacturer to make sure you choose the correct coupling and proper assembly for the application. Such matching of hose and couplings, and assembling of couplings, should be performed only by trained personnel using proper tools and procedures. Failure to follow manufacturer's instructions or failure to use trained personnel may result in serious bodily injury and/or property damage.

**⚠ WARNING:** Never use a hose to transfer material it is not specifically meant to transfer. Doing so could deteriorate the hose and result in leaking, hose bursting, or end blow-offs. This could lead to serious personal injury or death. Always transfer material in a hose that is designed specifically to transfer that material. This information is listed in this catalog.

**⚠ WARNING:** Consider both working pressure and pressure surges when determining "maximum" pressure. Failure to select a hose that meets both these requirements could lead to end blow-offs, hose leakage, and hose bursting. The result could be serious injury or death. The Eaton industrial hose you choose must meet or exceed the required working pressure, and must have a safety factor to allow for surge pressure.

**⚠ WARNING:** Do not use hose at temperatures that exceed the hose temperature rating. Doing so could deteriorate the hose, leading to leaks, hose bursting, and end blow-offs. This could result in serious personal injury or death.

**⚠ WARNING:** Selection of the proper hose for the application is essential to the proper operation and safe use of the hose and related equipment. Inadequate attention to selection of hose for the application can result in serious bodily injury or property damage. In order to avoid serious bodily injury or property damage resulting from selection of the wrong hose, you should carefully review the information in this catalog.

### EHW018

### Heavy Duty Fire Fighting Discharge EN 1947 2002-1/CAT.II TYPE C-CLASS 1

#### Construction:

**Tube:** Natural and synthetic rubber

**Reinforcement:** High-tensile synthetic textile

**Cover:** Synthetic rubber

#### Operating Temperature:

## Fire Fighting

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

Specialty – Fire Fighting

### H5751 & H5752 Chemical Booster

#### Construction:

**Tube:** Synthetic rubber  
**Reinforcement:** 2 textile braid  
**Cover:** Synthetic rubber

#### Operating Temperature:

-40°C to +82°C  
 (-40°F to +180°F)

#### Application:

- For pressure booster hose on fire fighting equipment

#### Markets:

- Fire fighting

#### Type of Couplings:

- Spanner hole type
- Barway

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EHN001

### Steel Mill Carbon Blower

#### Construction:

**Tube:** NR

**Reinforcement:** High-tensile synthetic textile with helical wire and anti-static copper wire

**Cover:** Pin-pricked synthetic rubber

#### Operating Temperature:

-40°C to +70°C  
(-40°F to +158°F)

#### Application:

- For carbon blower applications in steel mills and foundries

#### Markets:

- Steel mill

#### Type of Couplings:

Contact coupling manufacturer for coupling selection and installation

## Steel Mill

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

Specialty – Steel Mill

### EHN002

### Steel Mill FG Cooling Water Transfer

(Outside Temp. up to 600° C )

#### Construction:

**Tube:** Natural and synthetic rubber

**Reinforcement:** High-tensile synthetic textile

**Cover:** Synthetic rubber and glass fiber

#### Operating Temperature:

-25°C to +75°C  
(-13°F to +158°F)

#### Application:

- For cooling water transfer

#### Markets:

- Steel mill
- Foundries

#### Type of Couplings:

Contact coupling manufacturer for coupling selection and installation

### Steel Mill Non-flammable HD Cooling Water Transfer

#### Construction:

**Tube:** EPDM

**Reinforcement:** High-tensile synthetic textile

**Cover:** EPDM rubber and glass fiber

#### Operating Temperature:

-40°C to +150°C  
(-40°F to +300°F)

#### Application:

- For discharge of cooling water

#### Markets:

- Steel mill
- Foundries

### Steel Mill Heavy Duty Ceramic Coated Cooling Water Transfer

#### Construction:

**Tube:** EPDM rubber  
**Reinforcement:** High-tensile synthetic textile  
**Cover:** Ceramic coated EPDM rubber

#### Operating Temperature:

-40°C to +125°C  
 (-40°F to +257°F)

#### Application:

- For transfer of water and hot water where hose needs to be resistant to heat

#### Markets:

- Steel mill
- Foundries

#### Type of Couplings:

Contact coupling manufacturer for coupling selection and installation

### EHW500

### Industrial Welding

#### Construction:

**Tube:** Synthetic rubber

**Reinforcement:** High-tensile synthetic textile

**Cover:** Synthetic rubber

#### Operating Temperature:

-30°C to +80°C  
(-22°F to +176°F)

#### Application:

- For industrial welding with oxygen or acetylene

#### Markets:

- In-plant service
- Welding

#### Type of Couplings:

Contact coupling manufacturer for coupling selection and installation

## Welding

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHW502

### Heavy Duty Industrial Welding

#### Construction:

**Tube:** Synthetic rubber

**Reinforcement:** High-tensile synthetic textile

**Cover:** Synthetic rubber

#### Operating Temperature:

-30°C to +1000°C  
(-22°F to +212°F)

#### Application:

- For industrial welding with oxygen or acetylene

#### Markets:

- In-plant service
- Welding

#### Type of Couplings:

Contact coupling manufacturer for coupling selection and installation

### EHW504

### Welding Torch Cooling

#### Construction:

**Tube:** Synthetic rubber

**Reinforcement:** High-tensile synthetic textile

**Cover:** Synthetic rubber

#### Operating Temperature:

-40°C to +100°C  
(-40°F to +212°F)

#### Application:

- For delivery of water and cooling liquids suitable for welding torch

#### Markets:

- In-plant service
- Welding

#### Type of Couplings:

Contact coupling manufacturer for coupling selection and installation

### H0372

### BLACKCAT™ Hot Tar & Asphalt

#### Construction:

**Tube:** Nitrile

**Reinforcement:** 2-ply fiberglass with helical wire

**Cover:** Neoprene

#### Operating Temperature:

+177°C Intermittent  
(+350°F)

Handle intermittent temperature of hot tar and asphalt up to +400°F

#### Application:

- For suction & discharge of tar and asphalt

#### Markets:

- Road construction
- Roof construction

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

# Steam Service

## Introduction and Safety Information

### Heat Resisting Patrex or EPDM Tubes

- Eaton products' exclusive elastomers with superior heat resistance provide for longer service life...and will resist flaking rubber particles (popcorning) and will handle most steam cleaner detergents.

### Hi-Strength Steel Wire Braided Reinforcement

- Keeps the hose limber and easy to handle. Adds versatility... hot water cleaning to high pressure process steam service.

### EPDM or Oil Resistant

- Stand up to the dragging, scuffing and abuse found in many applications.

### Covers

- Ensures maximum service life and value. Exceptional aging, weathering, and heat resisting properties keep the hose flexible and easy to use.

### Permanent Branding for Easy Identification

- The name of the hose and the working pressure are molded into the hose cover...can't rub off. This lets the operator know that the hose is for steam service.

### The Eaton Brand Reputation for Quality

- Your assurance of dependable performance.

## Steam Service Hose Safety Information

### Important!

**⚠ WARNING:** Exposure to steam is hazardous. If not properly controlled, steam can cause property damage, serious bodily injury, or death. In order to avoid property damage, serious injury, or death, you must select the proper steam hose for the given application. Also, proper installation, usage and maintenance of the steam hose you select will contribute to increased operator safety.

**⚠ WARNING:** Failure to properly follow the manufacturer's recommended procedures for the care, maintenance and storage of a particular hose may result in its failure to perform in the manner intended and may result in serious injury, death, and damage to property.

**⚠ WARNING:** Only specially trained persons should engage in applications or testing procedures that require particular skills. Failure to do so may result in damage to the hose products or to other property and more importantly, may result in serious injury.

**⚠ WARNING:** Steam heat is hotter than 212°F (boiling water) and increases in temperature as pressure increases. See safety information in this catalog.

### Safety Tips

#### Common Sense with Steam Hose

- Provide operators with adequate safety clothing. Include gloves, rubber boots, full length protective clothing and eye protection. The objective is to provide protection from scalding burns resulting from splash back of steam or hot water.
- Ensure that the work area is free of tripping hazards and other clutter.
- Check the tightness of the coupling with each use.
- Do not allow the hose to remain pressurized when not in service. Turning off the pressure can provide dramatic increases in steam hose service life.
- Periodic maintenance of steam hose can pay big dividends. All steam hoses are expected to wear out in time. It is important to continually be on the lookout for hose that has deteriorated to the point where it can no longer provide safe service. The following guidelines can help in that determination.

#### Make Your Selection With Safety in Mind

- Be sure to select a hose identified as steam hose.
- Hose identification should be in the form of permanent branding on the hose outer cover, not just on the package.
- You must identify the type of service the steam hose is required to accomplish.
  - a) Is the hose manually handled?
  - b) What is the anticipated frequency of use?
  - c) What is the actual pressure of the steam service?
  - d) Is it subject to surges or peak pressures?
  - e) What is the temperature of the steam?
  - f) Saturated (wet) or superheated (dry) steam?
  - g) What are the external conditions in the area where the hose will be used?
- You should recognize that spillage or accumulations of corrosive chemicals or petroleum based materials externally can have a deteriorating effect on the hose cover.

#### Operators should be aware of the obvious signs of trouble:

They include:

- Cover blisters or lumps
- Cuts or gouges in the outside of the hose which expose the reinforcement
- Hardened or inflexible hose
- Steam leakages at the coupling ends or anywhere along the length of the hose
- Flattened or kinked areas which have damaged the hose
- A reduction of steam flow indicating that the tube is swelling

When any of the above abnormalities appear it is good safety sense to immediately remove the hose from service. Once removed, the hose can be carefully inspected before further use. Steam hose failures occur near the ends due to flexing and strain at the couplings. In those cases the hose can frequently be cut back and recoupled, providing additional service life. Hose used in continuous high pressure/ temperature service should be inspected periodically for signs of tube hardening. In most cases it is necessary to remove a coupling for tube inspection.

#### Making Sure the Hose is Installed Properly

- Be certain to use hose couplings designed for steam hose service. Follow the coupling manufacturer's instruction for coupling attachment. Check tightness with each use.
- Avoid extreme flexing of the hose near the coupling. If necessary use elbows in the piping system to assure a straight line connection with the hose.
- Installing and using a shut-off valve between the steam source and the hose will maximize service life and operator safety, and we consider such a value mandatory for safe operation.
- The use of spring guards can relieve some of the acute flexing encountered in heavy manual handling applications.
- Provide a suitable means of storing the hose when not in use. A permanent rack or tray will minimize the damage to the hose in storage. Do not hang the hose on a hook, nail, or other device which could cut or damage the hose.

### Recommendations

- 1 Install an OSHA approved safety cable on the hose at every junction to prevent whipping of the end if the coupling should disconnect.
- 2 Ensure continuous static grounding of the hose at each coupling.
- 3 If the clamps are a bolt-on style, tighten them to the correct torque before use. Use calibrated torque wrenches, not impact or other types.
- 4 Repairs on steam hoses and couplings should be done only by fully qualified distributors or fabricators.
- 5 All workers near the hose should wear full protective safety gear including gloves, safety shoes, full-length protective clothing and protective glasses or goggles.
- 6 Perform a complete safety check before the steam is turned on. Inspect the area and remove all unnecessary objects and debris. Inspect the hose for gouges, kinks, worn areas, loose couplings and other potential safety problems.
- 7 Install a shut-off valve between the source of steam and hose assembly.
- 8 Use spring guards to protect the hose from kinking when handling of the hose is required.
- 9 Avoid excessive flexing of the hose, particularly near couplings. Flexing can weaken the assembly.
- 10 Examine connections to the steam source. Use straight connections instead of bending the hose. Install pipe elbows to ensure either straight vertical connections pointing downward, or a 45° downward angle that allows the hose to gently contact the ground without too much flexing.
- 11 Be aware of the danger of hammer effect and take steps to prevent it. Hammer effect is caused by spikes of extreme pressure; it can damage hose assemblies and break couplings free. The usual causes are blockage, pinched-off flow or valves being opened or closed too fast. Make personnel aware of both the danger and causes, and urge them to avoid actions that can cause the hammer effect.
- 12 When finished using steam, always close the pressure valve from the steam source. In addition to providing an extra safety margin, this action can extend the working life of the hose.
- 13 Add an extra measure of safety by ensuring that all steam hose connections are incompatible with other hoses in the plant or by color-coding for different applications. Manufacturers can often cooperate with these requests and suggest good color-coding systems.
- 14 Train workers to look for signs of problems during usage, such as steam leakage, loose clamps, hose shrinkage, cover damage or exposed reinforcement.

## Specialized Hose

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EH084

### Steam Slayer™

#### Construction:

**Tube:** Special chlorobutyl blend

**Reinforcement:** 2-wire braid

**Cover:** Pin-pricked EPDM

#### Operating Temperature:

-40°C to +208°C  
(-40°F to +407°F)

For superheated steam  
+232°C (+450°F)

#### Application:

- Transfer of steam for processing products and cleaning equipment

#### Markets:

- Refining and petrochemical
- Paper industry
- Industrial cleaning markets
- Oil and gas exploration
- Steel
- Ship building

#### Type of Couplings:

- EJ Series

### EH080 & EH081

### Steam Slayer™

#### Construction:

**Tube:** Special chlorobutyl blend

**Reinforcement:** 2-wire braid

**Cover:** Pin-pricked EPDM

#### Operating Temperature:

-40°C to +208°C  
(-40°F to +407°F)

For superheated steam  
+232°C (+450°F)

#### Application:

- Transfer of steam for processing products and cleaning equipment

#### Markets:

- Refining and petrochemical
- Paper industry
- Industrial cleaning markets
- Oil and gas exploration
- Steel
- Ship building

#### Type of Couplings:

- EJ Series

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EHS002

### Textile Steam

#### Construction:

**Tube:** EPM

**Reinforcement:** High-tensile synthetic textile

**Cover:** Pin-pricked synthetic rubber

#### Operating Temperature:

-40°C to +165°C  
(-40°F to +329°F)

#### Application:

- Transfer of steam for processing products and cleaning equipment

#### Markets:

- Refining and petrochemical
- Paper industry
- Industrial cleaning markets
- Oil and gas exploration
- Steel
- Ship building

#### Type of Couplings:

- Boss male
- Ground joint female

## Specialized Hose

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### H969

### Hydrocarbon Drain

#### Construction:

**Tube:** Nitrile (RMA Class A)

**Reinforcement:** 2-wire braid

**Cover:** Pin-pricked CPE

#### Operating Temperature:

Maximum Operating  
+176°C (+350°F)

#### Application:

- For hydrocarbon drain service

#### Markets:

- Refining and petrochemical
- Paper industry
- Industrial cleaning markets
- Oil and gas exploration
- Steel
- Ship building

#### Type of Couplings:

- Boss male
- Ground joint female

\* NOTE: EJ Series couplings were specifically designed and tested for use with Eaton hoses and wall thicknesses, use on other hose is not recommended.

### Assembly Instructions

#### Step 1

Cut the hose square to the required length using a cut-off wheel. Clean the cut end and hose bore.

#### Step 2

Mark the end of the hose with the correct insertion depth by size. See Chart.

#### Step 3

Lubricate the ID of the hose with a water based lubricant such as P-80. You can also utilize a 5% dish soap/95% water mixture.

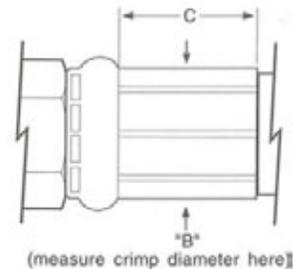

#### Step 4

Insert the fitting into the hose. Twist the fitting while inserting to help with spreading the lubricant and easier insertion.

Be sure the fitting is fully inserted by checking the end of the socket is aligned with the insertion depth mark on the hose.

#### Step 5

Crimp the hose to the specifications found in Chart. Measure the crimp diameter in 3 locations utilizing calipers and take the average to verify that the crimp is within the specified range. Also verify that the insertion depth mark on the hose is still at the end of the socket and that the hose has not pulled off of the fitting during the crimping process.

Hose Dash Size	Fitting Insertion Depth	Crimp Diameter "B"	Crimp Position "C"
		±0.12 mm ±0.005 in	±0.75 mm ±0.030 in

<b>-16</b>	34,7 mm 1.37 in	41,78 mm 1.645 in	32,39 mm 1.275 in

**None of the hoses listed are to be used as a pressure washer hose.**

*MTO (Made-to-Order) – Contact Eaton at 800-833-3837 for availability, minimum run quantity, and ordering information.*

Steam applications are hazardous to both personnel and equipment. These hazards are due to the high pressures and temperatures of steam conveyance. Hot water, low pressure steam and high pressure steam can cause severe scalding or bodily injury. Operators

should use extreme caution to avoid burns. Eaton understands the importance of utilizing quality products that provide maximum safety, especially when it comes to steam application, **safety always comes first.**

# Steam Service

## Eaton Steam Hose Assemblies

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### FK6496 & FK6500 Eaton Steam Hose Assemblies

Losses from a leaking steam system can cost in many ways. Personal safety, procurement, maintenance, and premature product replacement can all affect the bottom line. Eaton's new steam hose assembly system with our "New" Steam Slayer hose and the EJ series fitting offer a matched engineered assembly that was tested for over 2000 hours without any leakage.

This new matched assembly will also reduce the affects of static electric discharge. These new assemblies not only reduce maintenance cost, but also reduce operator's exposure to hazardous situations. Be sure to choose a matched hose and fitting engineered system designed specifically for steam applications.

## Introduction and Safety Information

### Every Hose is Easily Identified

- Every foot of hose is easily identified by means of permanent branding. This makes hose selection on the job quicker, easier and safer, and buying hose is easier too—because you can tell at a glance that you’re getting exactly the hose you ordered.

### Brand Name Identity (and the quality that goes behind it)

- With the Eaton brand name on the hose you buy, you are assured maximum value and consistent quality. With over 100 years worth of reputation at stake, we wouldn’t have it any other way.

## Thermoplastic Hose Safety Information

### Important!

**⚠ WARNING:** Testing can be dangerous and should be done only by trained personnel using proper tools and procedures. Failure to follow such procedures might result in serious injury, death, or damage to property.

**⚠ WARNING:** Failure to properly follow the manufacturer’s recommended procedures for the care, maintenance, and storage of a particular hose may result in its failure to perform in the manner intended and may result in serious injury, death, or damage to property.

**⚠ WARNING:** Consult with the Coupling Manufacturer to make sure you choose the correct coupling and proper assembly for the application. Such matching of hose and couplings, and assembling of couplings, should be performed only by trained personnel using proper tools and procedures. Failure to follow manufacturer’s instructions or failure to use trained personnel may result in serious bodily injury and/or property damage.

**⚠ WARNING:** Never use a hose to transfer material it is not specifically meant to transfer. Doing so could deteriorate the hose and result in leaking, hose bursting, or end blow-offs. This could lead to serious personal injury or death. Always transfer material in a hose that is designed specifically to transfer that material. This information is listed in this catalog.

**⚠ WARNING:** Consider both working pressure and pressure surges when determining “maximum” pressure. Failure to select a hose that meets both these requirements could lead to end blow-offs, hose leakage, and hose bursting. The result could be serious injury or death. The Eaton hose you choose must meet or exceed the required working pressure, and must have a safety factor to allow for surge pressure.

**⚠ WARNING:** Be aware that if you replace a hose with one having a different I.D. than the original hose, material velocity could increase or decrease, possibly creating static electricity. This could lead to an explosion causing serious injury or death.

**⚠ WARNING:** Selection of the proper hose for the application is essential to the proper operation and safe use of the hose and related equipment. Inadequate attention to selection of hose for the application can result in serious bodily injury or property damage. In order to avoid serious bodily injury or property damage resulting from selection of the wrong hose, you should carefully review the information in this catalog.

# Thermoplastic

## Specialized Hose

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHT305 & EHT306 Flame Resistant MSHA Flat Delivery

#### Construction:

**Tube:** Flame resistant PVC/NBR lining

**Reinforcement:** High-tensile synthetic textile

**Cover:** Flame resistant PVC

#### Operating Temperature:

-5°C to +60° C  
(+23°F to +140°F)

#### Application:

- Dewatering in mines and quarries

#### Markets:

- Mining

#### Type of Couplings:

- Cam and groove
- Combination nipples

## Specialized Hose

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHT005

### Medium Duty Suction and Discharge

#### Construction:

**Tube:** PVC spiral

**Cover:** PVC

#### Operating Temperature:

-5°C to +60° C  
(+23°F to +140°F)

#### Application:

- For medium-duty suction and delivery of water, salt water, light chemicals

#### Markets:

- Agriculture
- Industry
- Construction

#### Type of Couplings:

- Cam & Groove
- Combination nipples

Contact coupling manufacturer for attachment procedure and other coupling recommendations

# Water Hose

## Introduction and Safety Information

### Job Related Construction Service

- Eaton makes a wide variety of hose styles for water suction and discharge applications. Each product is manufactured utilizing the components and construction which makes it best suited for the job to be performed.

### Pressure and Vacuum Rated

- Eaton manufactures braided and spiral hoses using the latest technology in wire and synthetic yarns. As a result, Eaton hoses are pressure and vacuum resistant, as well as flexible and easy to handle.

### Quality Assured

- Value through design and quality control assures you of maximum performance from Eaton products.

## Water Suction and Discharge Hose Safety Information

### Important!

**⚠ WARNING:** Testing can be dangerous and should be done only by trained personnel using proper tools and procedures. Failure to follow such procedures might result in serious injury, death, or damage to property.

**⚠ WARNING:** Failure to properly follow the manufacturer's recommended procedures for the care, maintenance, and storage of a particular hose may result in its failure to perform in the manner intended and may result in serious injury, death, or damage to property.

**⚠ WARNING:** Never use a hose to transfer material it is not specifically meant to transfer. Doing so could deteriorate the hose and result in leaking, hose bursting, or end blow-offs. This could lead to serious personal injury or death. Always transfer material in a hose that is designed specifically to transfer that material. This information is listed in this catalog.

**⚠ WARNING:** Consider both working pressure and pressure surges when determining "maximum" pressure. Failure to select a hose that meets both these requirements could lead to end blow-offs, hose leakage, and hose bursting. The result could be serious injury or death. The Eaton hose you choose must meet or exceed the required working pressure, and must have a safety factor to allow for surge pressure.

**⚠ WARNING:** Do not use hose at temperatures that exceed the hose temperature rating. Doing so could deteriorate the hose, leading to leaks, hose bursting, and end blow-offs. This could result in serious personal injury or death.

**⚠ WARNING:** Selection of the proper hose for the application is essential to the proper operation and safe use of the hose and related equipment. Inadequate attention to selection of hose for the application can result in serious bodily injury or property damage. In order to avoid serious bodily injury or property damage resulting from selection of the wrong hose, you should carefully review the information in this catalog.

# Water Hose

## Suction & Discharge

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHW030

### OTTER™ PLUS Water Suction and Discharge

#### Construction:

**Tube:** EPDM

**Reinforcement:** High-tensile synthetic textile with dual helical wires

**Cover:** EPDM

#### Operating Temperature:

-40°C to +100°C  
(-40°F to +212°F)

#### Application:

- Pumping, suction, and discharge of water, mud and slurries
- Diluted agricultural fertilizers
- Convey water
- Transfer and haul salt water (brine)

#### Markets:

- Agriculture
- Construction
- Equipment rental
- Mining
- Ship building
- Oil and gas exploration
- Tank truck

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EHW009

### Heavy Duty Water Suction and Discharge

#### Construction:

**Tube:** Natural and synthetic rubber

**Reinforcement:** High-tensile synthetic textile and dual steel helical wire

**Cover:** Synthetic rubber

#### Operating Temperature:

-25°C to +70°C  
(-13°F to +158°F)

#### Application:

- For suction and discharge of water

#### Markets:

- Construction
- Industrial

#### Type of Couplings:

- Cam and groove
- Combination nipple

### EHW013

### Corrugated Water Suction & Discharge

#### Construction:

**Tube:** Natural and synthetic rubber

**Reinforcement:** High-tensile synthetic textile and steel helical wire

**Cover:** Corrugated synthetic rubber with cuffed ends

#### Operating Temperature:

-25°C to +70°C  
(-13°F to +158°F)

#### Applications:

- For water suction and discharge in agricultural, industrial and construction

#### Markets:

- Construction
- Agriculture
- Industrial

#### Type of Couplings

- Cam and groove
- Combination nipple

# Water

## Suction and Discharge

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHW005

### Flat Corrugated Water Suction & Discharge

#### Construction:

**Tube:** Natural and synthetic rubber

**Reinforcement:** High-tensile synthetic textile and steel helical wire

**Cover:** Synthetic rubber

#### Operating Temperature:

-25°C to +70°C  
(-13°F to +158°F)

#### Application:

- For suction and discharge of water

#### Markets:

- Construction
- Industrial
- Agricultural

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EH360

### Water Suction and Discharge

#### Construction:

**Tube:** Synthetic rubber blend

**Reinforcement:** Textile and a single steel helical wire with a dual steel helical wire on 8.00", 10.00" and 12.00"

**Cover:** EPDM and synthetic rubber blend

#### Operating Temperature:

-25°C to +70°C  
(-13°F to +158°F)

#### Application:

- Pumping, suction, and discharge of water, mud and slurries
- Convey water
- Transfer and haul salt water (brine)

#### Markets:

- Construction
- Equipment rental
- Mining
- Ship building
- Oil and gas exploration
- Tank truck

#### Type of Couplings:

- Cam and groove
- Combination nipple

### H0307 and H0379 Leader Water Discharge

#### Construction:

**Tube:** EPDM

**Reinforcement:** 2-ply,  
2 or 4 spiral fiber

**Cover:** EPDM

#### Operating Temperature:

-23°C to +66°C  
(-10°F to +150°F)

#### Application:

- For water discharge

#### Markets:

- Mining
- Construction
- Equipment rental
- Ship building
- Tank truck

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

# Water

## Discharge

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHW011

### Low Pressure Water Discharge

#### Construction:

**Tube:** Natural and synthetic rubber

**Reinforcement:** High-tensile synthetic textile

**Cover:** Synthetic rubber

#### Operating Temperature:

-25°C to +70°C  
(-13°F to +158°F)

#### Application:

- For general water discharge

#### Markets:

- Mining
- Construction
- In-plant service
- Gardening
- Assembly/manufacturers

#### Type of Couplings:

- Cam and groove
- Quick disconnect
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### EHW012

### Low Pressure Layflat Water Discharge

#### Construction:

**Tube:** Natural and synthetic rubber

**Reinforcement:** High-tensile synthetic textile

**Cover:** Synthetic rubber

#### Operating Temperature:

-25°C to +70°C  
(-13°F to +158°F)

#### Application:

- For water discharge

#### Markets:

- Construction
- Industrial
- Agriculture

#### Type of Couplings:

- Shank type male x female
- Cam and groove

Contact coupling manufacturer for attachment procedure and other coupling recommendations

### Channeled Hot Water Suction and Discharge

#### Construction:

**Tube:** EPDM rubber

**Reinforcement:** High-tensile synthetic textile and steel helical wire

**Cover:** Channeled EPDM rubber

#### Operating Temperature:

-40°C to +125°C  
(-40°F to +257°F)

#### Application:

- For suction and discharge of hot water in industrial applications

#### Markets:

- Construction
- Industrial

#### Type of Couplings:

- Cam and groove
- Combination nipple

# Water

## Hot Water

 Refer to warnings and safety information on pages P-1– P-16.

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

### EHW024

### Hot Water Suction and Discharge

#### Construction:

**Tube:** EPDM rubber

**Reinforcement:** High-tensile synthetic textile and steel helical wire

**Cover:** EPDM rubber

#### Operating Temperature:

-40°C to +125°C  
(-40°F to +257°F)

#### Application:

- For suction and discharge of hot water in industrial applications

#### Markets:

- Construction
- Industrial

#### Type of Couplings:

- Cam and groove
- Combination nipple

Contact coupling manufacturer for attachment procedure and other coupling recommendations

Use of damaged hose or improper use may result in bodily injury or property damage. Please consult Eaton catalog or Technical Support for proper application.

**H1196**

**ROYALFLEX**

**Construction:**

**Tube:** Thermoplastic vinyl nitrile  
**Reinforcement:** 100% polyester and helical wire  
**Cover:** Thermoplastic vinyl nitrile

**Application:**

- Transfer of water, liquid diluted fertilizers and pesticides
- Pumping, suction, and discharge of water and slurries

**Markets:**

- Petroleum industry
- Oil and gas exploration
- Tank trucks
- Waste hauling
- Batch plants

**Type of Couplings:**

- Male NPT
- Cam and groove

Contact coupling manufacturer for attachment procedure and other coupling recommendations

**Operating Temperature:**

-29°C to +82°C  
 (-20°F to +180°F)

## H345 Pressure Washer

### Construction:

**Tube:** Oil-resistant Nitrile (RMA Class A)

**Reinforcement:** 1-braid wire

**Cover:** Vinyl nitrile MSHA approved

### Operating Temperature:

-18°C to +93°C  
(0°F to +200°F)

### Application:

- High pressure cleaning and degreasing
- Washdown of food processing equipment
- Pressure wash engines, equipment, tanks, building, etc.

### Markets:

- Construction
- Food
- Marine
- Agriculture
- Oil exploration/drilling
- General industry
- Mining

### Type of Couplings:

- TTC Fittings
- "Z" Series

**EHW002**

**Radiator Hose**

**Construction:**

**Tube:** EPDM rubber  
**Reinforcement:** High-tensile synthetic textile  
**Cover:** EPDM rubber

**Operating Temperature:**

-40°C to +125°C  
 (-40°F to +257°F)

**Application:**

- Conveying hot water mixed with anti-freeze liquids in cooling systems, automotive and stationary engines

**Markets:**

- Automotive engine
- In-plant transfer
- Cooling systems

**Type of Couplings:**

Contact coupling manufacturer for attachment procedure and other coupling recommendations

# Couplings General Information

# Couplings

## General Information

### Coupling Selection

This catalog lists the most common type of coupling used for each hose. Consider the following items when selecting couplings for your application. Consult your coupling manufacturer and Eaton for further information about these items:

- Environment
- Temperature ranges - external environment year round, temperature of material being conveyed, and temperature of cleaning solution
- Maximum pressure requirements
- Corrosive resistance and compatibility with material being conveyed
- Conductivity - especially in flammable applications (non-spark brass cam lever arms)
- Gasket material required, if any, keeping in mind compatibility with the material being conveyed
- Port or fitting the hose assembly must be connected to
- Coating (if any) on coupling (i.e. zinc, etc.)

### Selecting Couplings: Safety Information

Choosing the correct coupling is important for maximum hose efficiency and safety. Couplings must be applied properly. Incorrect or improperly applied couplings can result in shorter hose life and hose failures. These failures can result in serious bodily harm or property damage.

Hose couplings have been carefully engineered over the years to meet specific safety requirements.

Some factors you should consider when choosing the proper coupling for a particular application are:

1. What is the material to be handled?
  - a) Is it dangerous?
  - b) Is it corrosive?
  - c) Is it abrasive?
2. What are the pressures involved?
  - a) High pressure
  - b) Medium pressure
  - c) Low pressure
  - d) Suction
3. What means of connection are required?
  - a) Threads
  - b) Special locking
  - c) Flanged ends

When selecting couplings, the end user should inform the distributor of the application and pressures involved when ordering hose assemblies, and it's up to the distributor to supply the right hose and coupling for that application.

All hose assemblies should be treated with respect as potential hazards. Fittings, clamps or clips should be checked on a regular basis, and removed from service if damaged.

Shank length of coupling should be 1-1/2 times the inside diameter of the hose.

**Combination nipples should only be used for suction and low pressure discharge applications.**

**WARNING:** Consult with the Coupling

Manufacturer to make sure you choose the correct coupling and proper assembly for the application. Such matching of hose and couplings, and assembling of couplings, should be performed only by trained personnel using proper tools and procedures. Failure to follow manufacturer's instructions or failure to use trained personnel may result in serious bodily injury and/or property damage.

# Couplings

## General Information

### Coupling Selection

There are two general types of couplings to consider, **field-attachable and permanent**.

**Field-attachable couplings** are usually secured by one of the following methods; flat bands, single bolt, double bolt or interlocking clamps.

Band clamps are generally used for applications requiring cam and groove style couplings (less than

150 psi). Bolt clamps generally offer greater security than bands and are therefore chosen more often for higher pressure applications. They can also be retightened after a hose has been in service.

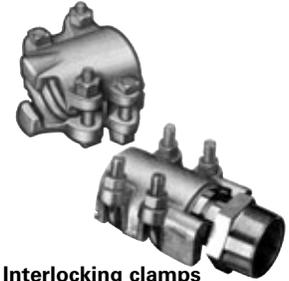

Flat band clamp

Double bolt clamp

Single bolt clamp

Interlocking clamps

**Permanent couplings** are also used in applications where you could see pressures greater than 150 psi. These end fittings are swaged, crimped or internally expanded onto the hose. Internal expansion couplings exist for full-flow applications and allow easier assembly cleaning.

Cam and groove coupling

King combination nipple coupling or "KC"

Flange end

# Couplings

## General Information

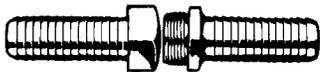

### Examples of Coupling Configurations

#### Short Shank

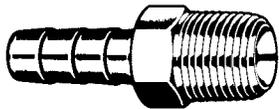

- Service:** Low pressure air and water service
- Size Range:** 3/16" to 1"
- Description:** Cast brass with serrated shank; GHT, NPSM or NPT male and NPSH female; washer seal
- Attachment:** Clamps or bands

#### Long Shank

- Service:** Medium pressure air, water, sanitary and liquids in suction or discharge service
- Size Range:** 3/8" to 4"
- Description:** Machined steel or brass with serrated shank; NPT or NPSM male and female; thread seal to NPT and washer seal to NPSM female Attachment Bands or clamps

#### Barbed Insets

- Service:** Low or medium pressure air, water and fluids
- Size Range:** 3/16" to 1"
- Description:** Machined brass with serrated shank; NPT or NPTF male and rigid female, and NPSM swivel female; thread seal to NPT or NPTF female, and ball end or washer seal to NPSM female
- Attachment:** Bands or clamps

#### Interlocking

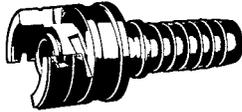

- Service:** High pressure air and water service, steam, high pressure spray, and LPG service
- Size Range:** 1/4" to 6"
- Description:** Plated malleable iron; insert and spud may be either steel or malleable iron; NPT male and female with ground joint or washer seal Attachment Four bolt or two bolt interlocking clamps

# Couplings

## General Information

### Quick Acting

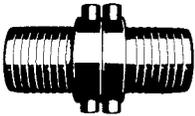

**Service:** Low to medium pressure; air, water or oil service where frequent and fast connections must be made

**Size Range:** 1/4" to 2"

**Description:** Plated malleable iron, stainless steel or bronze

**Attachment:** Interlocking clamps or bands

### Water Suction

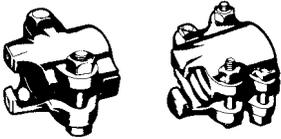

**Service:** Heavy duty water discharge and suction service

**Size Range:** 1" to 8"

**Description:** Malleable iron, aluminum and/or brass

**Attachment:** Clamps or bands

### Interlocking Clamp

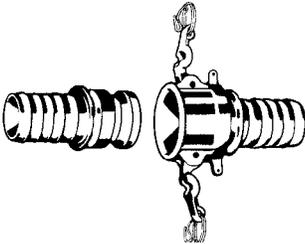

**Service:** Heavy duty high pressure applications such as air, steam, water, spray, LPG service

**Size Range:** 9/16" to 7 3/16" hose O.D.

**Description:** Malleable iron, plated

**Attachment:** Clamps bolted into position

### Cam and Groove

**Service:** Low and medium pressure water, petroleum and chemical transfer where fast connections are needed; also used for suction service

**Size Range:** 1/2" to 8"

**Description:** Aluminum, bronze, stainless steel, Monel, malleable iron; washer seal with no threads

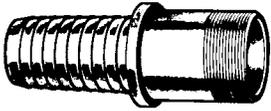

**Attachment:** Clamps, bands, or crimp/swage ferrules

# Couplings

## General Information

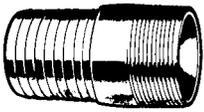

### Examples of Coupling Configurations, continued

#### Swaged or Crimped

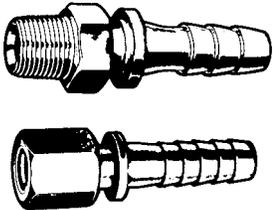

- Service:** For use on all types of hose where high pressures are used
- Size Range:** 1 1/4" to 8"
- Description:** Couplings consist of swaged fittings having serrated steel shanks with ferrules of plated steel
- Attachment:** Swaging or crimping equipment

#### Combination Nipple

- Service:** Low or medium pressure suction and discharge of water, fluids, and material handling
- Size Range:** 1/2" to 12"
- Description:** Tubular steel, stainless, malleable iron, aluminum or brass with serrated shank; NPT male threads, grooved, or beveled for welding
- Attachment:** Clamps or bands

#### Steel Nipple

- Service:** Medium to high pressure: wide variety of applications.
- Size Range:** 1/4" to 1"
- Description:** Machined from cold drawn bar steel, heat treated for toughness
- Attachment:** Interlocking clamps

#### Single Bolt Clamp

- Service:** Low pressure, and suction service on shank couplings, combination nipples, and pipe nipples
- Size Range:** 7/8" to 5 1/4" hose O.D.
- Description:** Cast malleable iron, plated.
- Attachment:** Bolted on hose

# Couplings

## General Information

### Double Bolt Clamp

**Service:** Low or medium pressure, and suction service with large sizes of combination nipples, or couplings

**Size Range:** 3 1/2" to 17 1/2" hose O.D.

**Description:** Cast malleable iron, plated, and brass

**Attachment:** Applied over hose and bolted into position

### Band Clamp

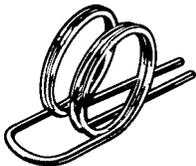

**Service:** Low or medium pressure, and suction service

**Size Range:** 3/4" to 6" hose O.D.

**Description:** Pre-formed flat stainless steel, high carbon steel

**Attachment:** Special locking band tool

### Wire Hose Clamp

**Service:** Suitable for medium pressure, air, water or general purpose hose; good for hose with helical wire or corrugations; available in larger sizes for pin lug, serrated pipe nipple or combination nipples

**Size Range:** 5/8" to 13 1/4" hose O.D.

**Description:** Pre-formed round wire made of stainless steel, galvanized steel, copper, bronze or aluminum

**Attachment:** Wire ends pulled and crimped with special tool or machine

### Brass Ferule

**Service:** Low or medium pressure air or water using general purpose hose and brass inserts

**Size Range:** 31/64" to 1 1/2" hose O.D

**Description:** Made from various gauge brass tubing; stamped with Standard Industrial Part Number

**Attachment:** Crimped on using either ribbed or plain die

# General Hose Information

# General Hose Information

## Hose Construction

### Hose Construction

A hose consists of three components including the tube, reinforcement, and cover. Each component serves an important function in contributing to the overall performance of the hose.

### Components of a hose:

#### Tube functions:

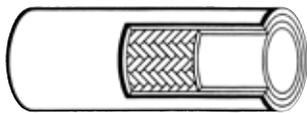

- Conveys media
- Temperature resistant
- Protects reinforcement and cover
- Dissipates static electricity

#### Reinforcement functions:

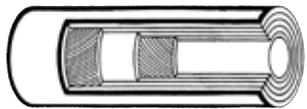

- Supports pressure/vacuum
- Supports tube
- Controls elongation/shrinking of hose OD/ID
- Helps fitting retention

#### Reinforcement types:

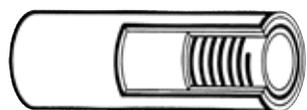

- 1) Braid - carbon steel or fiber
- 2) Spiral - carbon steel or fiber
- 3) Helical - carbon steel

Braid reinforcement

Spiral reinforcement

Helical reinforcement

### Cover functions:

- Protects reinforcement from external environment
- Provides weather, abrasion, chemical, temperature, and ozone resistance

### Hose Selection

Selecting the proper hose for an application is critical to ensure safety of people and property, as well as long hose life. Therefore, it is important to understand the factors involved.

#### These factors are:

- Application
- Pressure and/or suction
- Environment
- Compatibility with material conveyed
- Temperature
- Size
- Flexibility
- Bend radius
- Weight

### Application

The first step in properly selecting a hose is to identify the application and material to be transferred. Then consider the hoses available for that type of service. Eaton Industrial hose is intended for specific applications and materials.

### WARNING Hose use and care:

**Never use a hose to transfer material it is not specifically meant to transfer. Doing so could deteriorate the hose and result in leaking, hose bursting, or end blow-offs. This could lead to serious personal injury or death. Always transfer material in a hose that is designed specifically to transfer that material.**

A special application consideration, especially in gases, petroleum-based liquids, volatile solvents, and dry material transfer applications, is whether the velocity of the material being transferred will cause static buildup. This, in turn, can cause an explosion.

#### According to ARPM Hose Handbook 8th edition 2009:

Electrical engineers differ in opinion on the effects of static electricity and the means of dissipating it. In handling gasoline and other petroleum-based liquids, recognized national associations and companies have conflicting opinions on the need for conductive hoses.

Until a consensus is reached among all associations, laboratories and users and a standard practice is established, it is essential that the user determine the need for a static bonded hose based on (a) the intended use of the hose, (b) instructions from the company's Safety Division, (c) the insurer, and (d) the laws of the States in which the hose will be used.

Some types of hose include

a body reinforcing wire. This wire can be used for electrical continuity provided that proper contact is made between it and the hose coupling. This can be done by extending the body wire to the ends of the hose, or by attaching a light static wire to the outermost coils of the body wire. This lighter wire is led through the ends of the hose and attached to the couplings. In nonwire reinforced hose, a static wire can be included in the hose body.

The tendency has been toward a grounding connection completely separate from the hose or to have the tube or cover of the hose conducting. Examples would be sand blast hose with conducting tube or aircraft fueling hose with a conducting cover.

An internal static wire could break or lose contact with the couplings and not be detected visually. This could occur from an unusual stress imposed on the hose.

Finally, be aware that many industries have governing agencies that issue mandatory or suggested guidelines for the use of hose in certain applications.

# General Hose Information

## Hose Construction

### Pressure & Suction

The selected hose and coupling must be able to continually withstand the maximum pressure that will be generated in the application.

**WARNING** Hose use and care: Consider both working pressure and pressure surges when determining “maximum” pressure. Failure to select a hose that meets both these requirements could lead to end blow-offs, hose leakage, and hose bursting. The result could be serious injury or death. The Eaton Industrial hose you choose must meet or exceed the required working pressure, and must have a safety factor to allow for surge pressure.

It may be reassuring to know that every length of Eaton Industrial chemical transfer hose is pressure tested to 1-1/2 times the working pressure before it is packaged and shipped.

**CAUTION** In suction applications, suction (or vacuum) considerations are as critical to hose life as pressure considerations. Hoses in these applications are vulnerable to crushing forces because the atmospheric pressure outside the hose is greater than the pressure inside the hose. A hose not having the proper suction rating for your applications may collapse and result in equipment failure.

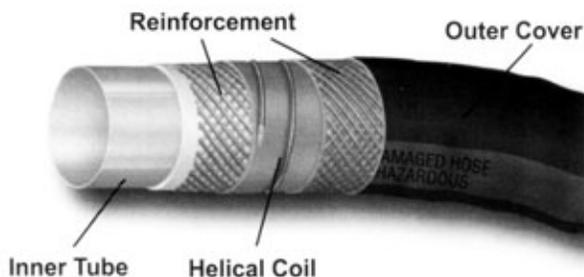

Eaton Industrial suction hoses have helical wire reinforcement and are rated for full vacuum. “Inches of mercury” is the standard of measurement for vacuum. Full vacuum is equal to 29.92 inches of mercury.

### Environment & Compatibility

Environment refers to both the external environment and the internal environment in which the hose will be working. Different components of the hose will be affected by these two types of environment.

Most hoses consist of three components: an inner tube, a reinforcement, and an outer cover.

Elastomers are the basic ingredient of all rubber compounds. However, be aware that when specifying tube and cover compounds, significant application differences may exist between two compounds listed as having the same basic elastomer.

For example, Eaton Industrial’s Tiger and Otter hoses list inner tubes made from EPDM, but *recommended* use for each of these hoses is quite different.

These differences occur because compounds contain many materials in addition to elastomers. Some of these materials include processing aids, carbon black, vulcanization agents, accelerators, age resistors, and other ingredients. Before making assumptions about the suitability of a particular hose for a given application, always read the “Applications” information for each specific hose listed in this catalog.

The first hose component, the inner tube, conveys the material being transferred. The tube must be compatible with these materials. This is the hose’s internal environment. Whenever you specify a Eaton Industrial hose, refer to the chemical resistance chart in this catalog.

**DANGER** Never transfer material in an inner tube that is not compatible with that material. Likewise, never use hose at temperatures, pressures, or chemical concentrations above those recommended by Eaton. Doing so will weaken or deteriorate the hose, leading to leakage, hose bursting, or end blow-offs. Personal injury or death can result.

The next hose component, the reinforcement, is the strength member of the hose. Reinforcement usually consists of fiber, thermoplastic, carbon steel, or stainless steel spirals, braids and coils. The helical coil is used in all hardwall hoses and is required in vacuum and suction applications. The coil is necessary to help the hose withstand atmospheric pressure that is greater than the internal pressure of the hose to prevent the hose from collapsing. It is usually made of steel or thermoplastic monofilament.

# General Hose Information

## Hose Construction

The final hose component is the outer cover. The outer cover protects the reinforcement from the external environment. It is usually rubber, thermoplastic, fiber, or metal. The hose outer cover must protect against weathering, abrasion, chemicals, extreme temperature ranges, ozone, and other adverse conditions.

The "Elastomers" chart in this catalog (page P-14) contains a listing of general characteristics of some common elastomers and their physical properties as they relate to specific service needs. When application questions arise, contact Eaton Technical Support:

North America contact  
Eaton Technical Support  
1-888-258-0222

For global support contact your local Eaton technical representative.

Heat can be a catalyst for chemical reaction. When selecting a Eaton Industrial hose, consider both the ambient temperature and the temperature of the material being conveyed.

**⚠ WARNING Do not use a hose at temperatures that exceed the hose temperature rating. Doing so could deteriorate the hose, leading to leaks, hose bursting, and end blow-offs. This could result in serious personal injury or death.**

Cold temperatures are another consideration. Hose must be flexible and be able to withstand temperatures well below 0°F in some applications.

Be aware that rated hose temperatures do not imply that a hose can handle all materials within the listed temperature range and concentration.

For specific application information and hose temperature ratings, always follow the guidelines in this catalog, or contact Eaton Technical Support:

North America contact  
Eaton Technical Support  
1-888-258-0222

For global support contact your local Eaton technical representative.

All chemicals listed in the chart are rated at 70°F unless otherwise stated.

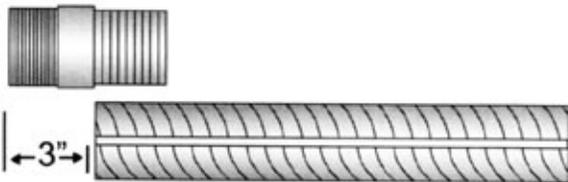

### Size

Size can refer to the length of the hose, the inner diameter (I.D.), and the outer diameter (O.D.). To determine the correct length of hose for an application, always remember to subtract the cut-off factor for each end fitting or coupling from the overall length of the assembly. For example, if the total length of the assembly needs to be 20 feet, and each end extends past the hose three inches, the cut-off factor is three inches at each end, or six inches total. Twenty feet minus six inches yields a hose length of 19-1/2 feet.

Remember to subtract the cut-off factor for each end fitting when preparing hose.

Inner diameter is important in relation to volume transfer requirements. The larger the hose inner diameter, the greater the volume of material that can be transferred in a given time.

**⚠ WARNING Be aware that if you replace a hose with one having a different I.D. than the original hose, material velocity could increase or decrease, possibly creating static electricity. This could lead to an explosion causing serious injury or death.**

**Cut-off Factor**

# General Hose Information

## Hose Maintenance

### Hose Maintenance

Hose has a limited life based on the severity and type of chemical contact, environment or exposure to heat and petroleum products. Eaton recommends the following maintenance procedure to determine when hose should be replaced.

### General Test and Inspection Procedures for Hose

An inspection and hydrostatic test should be done periodically to ensure hose is suitable for continued service.

A visual inspection of the hose should be made for loose covers, kinks, bulges, or soft spots which might indicate broken or displaced reinforcement. The couplings or fittings should be closely examined and, if there is any sign of movement of the hose from the couplings, the hose should be removed from service.

The periodic inspection should include a hydrostatic test for one minute at 150 percent of the recommended working pressure of the hose. During the hydrostatic test, the hose should be straight, not coiled or in a kinked position. Water is the usual test medium and, following the test, the hose may be flushed with alcohol to remove traces of moisture. A regular schedule for testing should be followed and inspection records maintained.

### Hose Inspection

Hose assemblies shall be inspected and tested immediately after the hose is subjected to abnormal abuse such as: severe end pull, flattening or crushing or sharp kinking. As you inspect a hose assembly, remember that most hose failures occur between the coupling and the first three feet along the hose length. Pay close attention to this area. Any hose that has been recoupled shall be proof-tested for one minute at 150 percent of the recommended working pressure of the hose, and inspected before being placed in service.

**SAFETY WARNING:** Before conducting any pressure tests on hose, provision must be made to ensure the safety of the personnel performing the tests and to prevent any possible damage to property. Only trained personnel using proper  tools and procedures should conduct any pressure tests.

The following guidelines should be adhered to during testing and/or inspection:

1. Air or any other compressible gas must never be used as the test medium because of the explosive action of the hose should a failure occur. Such a failure might result in possible damage to property and serious bodily injury.
2. Air should be removed from the hose by bleeding it through an outlet valve while the hose is being filled with the test medium.
3. Hose to be pressure tested must be restrained by placing steel rods or straps close to each end and at approximate 10 foot (3m) intervals along its length to keep the hose from "whipping" if failure occurs; the steel rods or straps are to be anchored firmly to the test structure but in such a manner that they do not contact the hose which must be free to move.
4. The outlet end of hose is to be bulwarked so that a blown-out fitting will be stopped.
5. Provisions must be made to protect testing personnel from the forces of the pressure medium if a failure occurs.
6. Testing personnel must never stand in front of or in back of the ends of a hose being pressure tested.
7. If liquids such as gasoline, oil, solvent, or other hazardous fluids are used as the test fluid, precautions must be taken to protect against fire or other damage should a hose fail and the test liquid be sprayed over the surrounding area.

### Visual Inspection

#### 1. Hose

Any cuts, gouges or tears in the cover which do not expose the reinforcement should be repaired before the hose is returned to service. If the reinforcement is exposed, retire the hose from service.

Covers may show surface cracking or crazing due to prolonged exposure to sunlight, ozone, or high temperature during soak tank cleaning. Such deterioration, which does not expose reinforcing materials, is not cause for retirement.

Check for signs of soft spots, blisters, and kinking. If soft spots exist, pressure test the hose assembly and determine whether it is necessary to discard it.

**WARNING** If cover blisters exist, be careful not to pop them. If the hose was damaged in such a way that material was allowed to leak between the cover  and inner tube, the blisters may contain this material. If the material is hazardous and splatters when the blisters are popped, it could cause serious physical injury.

# General Hose Information

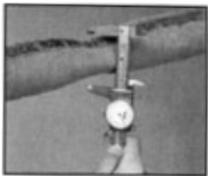

## Hose Maintenance

Look for any indication of kinking or broken reinforcement as evidenced by any permanent distortion, longitudinal ridges, or bulges.

According to RMA IP-11-7 Chemical Hose Bulletin, crushed or kinked spots where the hose O.D. is reduced by 20 percent or more of the normal O.D. indicate the hose probably has internal damage. The hose assembly must be removed from service to ensure the safety of people in the work area.

**⚠ WARNING: Kinks can cause hose to burst, leading to bodily harm.**

Hose containing kinked or crushed spots where the hose O.D. is reduced by 20 percent may be used if the hose passes the hydrostatic tests. Use a caliper to measure the hose outer diameter at several places around the diameter to determine any O.D. reduction. An inspection mirror and a flashlight can be used to inspect the inner tube for abuse, wear, and/or chemical attack.

### 2. Couplings

All metals are subject to attack by various chemicals. Check with the manufacturer to make sure that suitable end fittings, appropriate to both the hose and the chemical being handled, are being used.

Exposed surfaces of couplings, flanges and nipples shall be examined for cracks or excessive corrosion. Either condition shall cause the hose assembly to be retired from service. Any evidence of coupling or nipple slippage on the hose is cause for removing the hose assembly from service.

The Rubber Manufacturers Association (RMA) has published a series of technical bulletins which detail maintenance, testing, and inspection recommendations.

Because the life expectancy of the hose is limited, the user must be alert to signs of impending failure, particularly when the conditions of service include high working pressures and/or the conveyance or containment of hazardous materials. The periodic inspection and testing procedures described here provide a schedule of specific measures which constitute a minimum level of user action to detect signs indicating hose deterioration or loss of performance before conditions leading to malfunction or failure are reached.

**⚠ SAFETY WARNING:**  
**Failure to properly follow the manufacturer's recommended procedures for the care, maintenance and storage of a particular hose might result in its failure to perform in the manner intended and might result in possible damage to property and serious bodily injury.**

### Hydrostatic Pressure Test

For large-bore hose being used in dock service, an inspection card which describes the hose, manufacturer, date received, purchase order number, and date of installation should be maintained for each hose. The inspection card should be used to record the test results and condition of the hose.

Eaton recommends that new hose assemblies be hydrostatically tested before being placed in service. Hydrostatic testing should be done at periodic intervals to determine if a hose is suitable for continued service. The hydrostatic test and examination shall be conducted in the following manner.

**Hose to be pressure tested must be restrained by placing steel rods or straps close to each end and at approximate 10 foot (3m) intervals along its length to keep the hose from "whipping" if failure occurs; the steel rods or straps are to be anchored firmly to the test structure but in such a manner that they do not contact the hose which must be free to move.**

1. Hose shall lie in a straight

and horizontal position supported on rollers to permit easy movement when under the test pressure.

2. Water should be used as the test liquid. Never pressure test with solvents, corrosive liquids, or with compressed gases.
3. Fill the hose with water with the outlet end raised and the outlet valve open to ensure the complete removal of air. When all the air has been expelled, close the outlet valve and lower the raised end.
4. For new hose, raise the pressure to 2 times the rated working pressure of the hose and hold for 5 minutes. During this hold period, the hose shall be examined for leaks at the couplings, fitting slippage, or for any indication of weakness in the hose structure.
5. For used hose, test with a pressure of 1-1/2 times the rated working pressure of the hose for one minute and examine as above.
6. Completely relieve test pressure from the system prior to releasing hose from test equipment.
7. Thoroughly drain the water from the hose after completion of the hydrostatic test.

### Electrical Continuity

When required by the user, electrical continuity between the fittings shall be tested using an ohm meter. The hose must be clean and dry for this test.

# General Hose Information

## Hose Maintenance

### General Care and Maintenance of Hose

Hose should not be subjected to any form of abuse in service. It should be handled with reasonable care. Hose should not be dragged over sharp or abrasive surfaces unless specifically designed for such service. Care should be taken to protect hose from severe end loads for which the hose or hose assembly was not designed. Hose should be used at or below its rated working pressure; any changes in pressure should be made gradually so as to not subject the hose to excessive surge pressures. Hose should not be kinked or be run over by equipment. In handling large size hose, dollies should be used whenever possible; slings or handling rigs, properly placed, should be used to support heavy hose used in oil suction and discharge service.

### Hose Repair

There are some circumstances in which chemical hoses can be repaired. For example, if a hose has been kinked near the coupling and a close inspection of the assembly reveals that this is the only damage, the assembly can be repaired.

 **WARNING** Wear safety glasses, gloves, and protective clothing when cutting hose. They will help protect your eyes and skin from flying debris. When recoupling a used hose assembly, begin by cutting

the hose far enough beyond the shank to eliminate the possibility of cutting into the shank. When cutting out a kink, cut behind the kink far enough so that the ID/OD of the remaining hose is round. Use calipers to confirm roundness. Make sure to cut the hose squarely. Next wipe the inner tube of the cut end with a clean rag.

Before recoupling the hose, make sure to carefully inspect the tube. This is important because it is easy to see the condition of the tube and reinforcement of the hose when the coupling is cut off. Look for any evidence of deterioration of the hose tube. If there are signs of deterioration, remove the hose assembly from service. If after close inspection none of these signs is present, the hose may be recoupled.

Any hose that has been used to convey an abrasive material, such as plastic pellets and powders, should not be recoupled due to the inherent thickness reduction that results from the transfer of abrasive materials.

Finally, pressure test and tag any recoupled assembly as recommended.

### Storage

Proper storage conditions can enhance and extend substantially the ultimate life of hose products. Rubber hose products in storage can be affected adversely by temperature, humidity, ozone, sunlight, oils, solvents, corrosive liquids and fumes, insects, rodents and radioactive materials. The appropriate method

for storing hose depends to a great extent on its size (diameter and length), the quantity to be stored, and the way in which it is packaged. Hose should not be piled or stacked to such an extent that the weight of the stack creates distortions on the lengths stored at the bottom. Since hose products vary considerably in size, weight, and length, it is not practical to establish definite recommendations on this point. Hose having a very light wall will not support as much load as would a hose having a heavier wall or hose having a wire reinforcement. Hose which is shipped in coils or bales should be stored so that the coils are in a horizontal plane.

### Storage Do's:

- Whenever feasible, rubber hose products should be stored in their original shipping containers which provide some protection against the deteriorating effects of oils, solvents, and corrosive liquids; shipping containers also afford some protection against ozone and sunlight.
- Certain rodents and insects will damage rubber hose products, and adequate protection from them should be provided. Be sure ends are capped to keep out insects, rodents, and other contaminants that can damage the hose.
- Hose shipped in coils or bales should be stored so the coils are in a horizontal plane.
- Store items on a first-in,

first-out basis. Remember that even under the best of conditions, an unusually long shelf life will deteriorate certain rubber products. Inspect and test the hose assembly before placing it in service. Usually, any wear or damage will be apparent during inspection or testing.

- The ideal temperature for the storage of rubber products ranges from 50° to 70°F (10-21°C) with a maximum limit of 100°F (38°C). If stored below 32°F (0°C), some rubber products become stiff and will require warming before being placed in service.
- Storage areas should be relatively cool and dark, and free of dampness and mildew. Items should be stored on a first-in, first-out basis, since even under the best of conditions, an unusually long shelf life could deteriorate certain rubber products.

### Storage Don'ts:

- Don't pile or stack hose to such an extent that the weight of the stack distorts the lengths stored on the bottom. Remember that hose having a very light wall will not support as much load as a hose having a heavier wall or wire reinforcement.

# General Hose Information

## Hose Maintenance

- Don't store rubber products near heat sources such as radiators and base heaters, or near electrical equipment that might generate ozone. Also do not store hose for long periods in geographical areas of known high ozone concentration. Ozone ages rubber.
- Don't expose hose to direct or reflected sunlight during storage. This ages rubber
- Don't store uncovered hose under fluorescent or mercury lamps. They generate light waves harmful to rubber.
- Don't hang hose assemblies on hooks, nails, or other devices which could cut or damage hose.

The Rubber Manufacturers Association has published separately a series of Hose Technical Information bulletins describing hoses designed for different applications which detail Maintenance, Testing and Inspection recommendations. Refer to the *ARPM Catalog of Publications*, issued annually, to determine the availability of the latest edition. Bulletins published include the following:

### Publication No.

- IP 11—1— Steam Hose
- IP 11—2 — Anhydrous Ammonia Hose
- IP 11—4— Oil Suction and Discharge Hose
- IP 11—5— Welding Hose
- IP 11—6— Fire Hose
- IP 11—7— Chemical Hose

### Proper Used Hose Storage

Before placing used hose in storage, completely drain it and flush out any potentially explosive vapors or corrosive residues.

Also make sure you dispose of waste in a manner that complies with federal, state, and local environmental regulations.

**WARNING: Take extreme care when flushing out a chemical hose with water. Some chemicals, such as concentrated acids, may react with water and cause spattering. These materials can cause serious personal injury or death if they get into eyes or onto skin. Wear safety glasses, gloves and other protective clothing to help guard against this.**

Continue by laying the hose assembly on a solid support, allowing air to circulate through it. This helps extend the hose life. Further, store the hose in a cool, dark, dry place at a temperature ideally between 50°F and 70°F.

### Proper Hose Handling

Proper hose handling can help preserve hose assembly life and work environment safety. Therefore, consider the following points when handling hose assemblies.

- Avoid crushing or kinking the hose. This can cause severe damage to the reinforcement that isn't always obvious when looking at the cover.
- Do not drag the hose or lift a large bore hose from the middle of its length with the ends hanging down. Doing so can cause kinking, cover cuts, hose reinforcement damage, and coupling damage.
- Limit the curvature of the hose to the minimum bend radius recommended by the manufacturer. Also avoid sharp bends at the end fittings and at manifold connections.
- Do not exceed pressure and temperature limits because this could damage the hose and ultimately result in serious bodily injury or property damage. Monitor pressure and temperature during hose use.
- Never allow chemicals, solvents, or any other hazardous materials to drip onto ground. Always comply with environmental laws.
- Never allow chemicals to drip on the exterior of a hose or allow hose to lay in a pool of chemicals. The hose cover may not have the chemical resistance of the tube. If a corrosive material comes into contact with the hose reinforcement, the result could be early hose failure.
- Avoid extreme flexing of the hose near the coupling. If necessary, use elbows in the piping system to assure a straight line connection with the hose.
- Protect hose from heat, flame, cutting, and twisting. Use shields or clamps to do this.
- Support hose to avoid mechanical strain on couplings.
- Be aware that dropping or dragging the assembly, chemical incompatibility, exposure to temperature extremes, or extensive internal coupling abrasion can cause leaks and reduce coupling retention.

**WARNING: Do not use damaged hose. Doing so could result in serious personal injury or death.**

# General Hose Information

## Hose Care

### Cleaning Hose Assemblies

Cleaning of hose assemblies should be done at a facility with the means of disposing of wastes and hazardous materials properly. All water and/or cleaning solutions used should be retained and disposed of in a way that complies with applicable laws.

Eaton Industrial does not recommend that distributors handle hose assemblies that have not been cleaned properly.

When you clean a tank or change the materials to be transferred, clean the hose assemblies. Three methods can be used: the soak tank, the closed loop system, or the rotating brush. The most appropriate method will depend on the hose use and location.

 **WARNING: Use of pressure wands to clean hose is not recommended. The high concentration of heat and pressure in a confined area can damage the hose inner tube and lead to hose bursting, leakage, spraying, or end blow-offs. This could cause serious personal injury or death.**

 **WARNING: Always wear safety glasses, gloves, and protective clothing when cleaning hose, no matter which hose cleaning method you use. Otherwise, burns, blisters, eye damage or other injuries could occur.**

If you choose the soak tank method, the cleaning solution usually caustic soda and water- should be no more than 150°F. Gently lay the hose in the cleaning solution to prevent it from splashing.

Soak the hose no more than 15 minutes to prevent the hose from becoming brittle with a shortened service life. Flush the hose thoroughly with clean water. After making sure that all the water is drained from the hose, store the hose in a cool, dry place. Once the hose has cooled (approximately 45 minutes), cap the ends to keep contaminants out.

The second method of cleaning is the closed-loop system. With this method, the caustic solution used to clean the tank is also pumped through the hose and back to the tank. Typically, fluid is 180°F and is pumped through the system until the tank is clean.

When the cleaning process is complete, flush the hose thoroughly with water. Store the hose in a cool, dry place. Cap the ends to keep contamination out.

 **WARNING: Strong acids should be thoroughly drained prior to and after cleaning to avoid an exothermic reaction.**

### Class Oil Resistance

Rubber hose is used to convey petroleum products both in the crude and refined stages. The aromatic content of refined gasoline is often adjusted to control the octane rating. The presence of aromatic hydrocarbons in this fuel generally has a greater effect on rubber components than do aliphatic hydrocarbons. Aromatic materials in contact with rubber tend to soften it and reduce its physical properties. For long lasting service, the buyer of gasoline hose should inform the hose manufacturer of the aromatic content of the fuel to be handled so that the proper tube compound can be recommended for the specific application.

The effects of oil on rubber depend on a number of factors that include the type of rubber compound, the composition of the oil, the temperature and time of exposure. Rubber compounds can be classified as to their degree of oil resistance based on their physical properties after exposure to a standard test fluid. As a guide to the user of the hose in contact with oil, the oil resistance classes and a corresponding description are listed.

### Physical Properties After Exposure to Oil

	Volume Change Maximum	Tensile Strength Retained
Class A (High oil resistance)	+25%	80%
Class B (Medium-High oil resistance)	+65%	50%
Class C (Medium oil resistance)	+100%	40%

**⚠ WARNING:** Selection of the proper hose for the application is essential to the proper operation and safe use of the hose and related equipment. Inadequate attention to selection of hose for the application can result in serious bodily injury or property damage. In order to avoid serious bodily injury or property damage resulting from selection of the wrong hose, you should carefully review the information in this catalog.

Hose failures can be caused by conditions such as excessive pressures, fluid incompatibility, extreme temperatures and many more. Eaton has illustrated below some of the more common failures. If the conditions you are experiencing are not listed, please contact Technical Support:

for North America contact Eaton Technical support at 1-888-258-0222

for global technical support contact your local Eaton technical representative.

**1. Problem:** The hose has exposed reinforcement and a loose cover. This could be caused by an abrasive environment or the life of the hose has been exceeded.

**Solution:** Route hose properly to avoid excessive abrasion. Some hoses are made with materials that handle abrasion better.

**2. Problem:** Cracks in the hose cover can be caused by prolonged exposure to sunlight, ozone or high temperatures.

**Solution:** Store hose in cool dark areas when possible. Do not store or use the hose where the recommended temperature rating is exceeded.

**3. Problem:** Cuts, gouges, or tears in hose tube can be caused by improper cleaning with high-pressure water wand.

**Solution:** Do not use high pressure water wand to clean hoses. Instead, three cleaning methods are commonly used: the soak tank, the closed loop system or the rotating brush. The most appropriate method will depend on the hose use and location.

**4. Problem:** Bubbling and flaking of the tube material caused by the tube not being compatible with the chemical being conveyed.

**Solution:** Check the chemical resistance guidelines to make sure the hose you are using is compatible with the chemical(s) being transferred. Also, make sure the hose can handle the application temperatures.

**5. Problem:** Deterioration of the hose tube has caused the reinforcement to be exposed. This may be caused by abrasive material being conveyed through a hose not made for this abrasive material or hose life has been exceeded.

**Solution:** Make sure that the hose can handle the material being conveyed. Possibly use a hose with a thicker tube.

**6. Problem:** Hose is kinked due to exceeding the minimum bend radius of the hose. The result is damaged reinforcement.

**Solution:** To avoid this problem, check the minimum bend radius of the hose and route the hose so the minimum bend radius is not exceeded.

**7. Problem:** Improperly banded shank may create a possible leak path.

**Solution:** Make sure the coupling is secured tightly and according to manufacturer's specifications. Bands should be placed inside of the barbs on the coupling shank, toward the coupling side. The band farthest from the hose end should be tightened first. If two bands are present, Eaton suggests rotating the clamp buckles 180° from each other.

**8. Problem:** Overtightened band could cause leaks, spraying and end blow-offs. Band was applied with excessive pressure and cut the cover of the hose causing reinforcement to be exposed.

**Solution:** Do not attach bands at pressures that are too high. Apply the bands to the manufacturer's recommended settings.

**9. Problem:** The steam hose has developed cracks in the cover due to heat in the application.

**Solution:** Steam hose has a limited service life. It should be inspected before every use. Any crack that exposes the reinforcement is a reason for the hose to be removed from service.

# General Hose Information

## Hose Selection

There are several factors which affect selection of a hose sized such that it will provide the desired rate of flow at the required pressure; these are:

- Hose size
- Hose length
- Hose fittings
- Material conveyed
- Bends
- Static head pressure

### Hose Size

Undersized pressure lines produce excessive pressure drop with attendant energy loss and heating, and undersized suction lines cause cavitation at the pump inlet. Oversized hose assemblies, on the other hand, are excessively costly and generally too heavy.

In selecting hose for hydraulic systems, the following empirical values can be used to achieve minimum pressure drop consistent with reasonable hose size (see Chart 2):

*Velocity of pressure lines 7 to 15 ft./sec. Velocity of short pressure lines to 20 ft./sec. Velocity of suction lines 2 to 5 ft./sec. To use Chart 2, lay a straight-edge across the chart as shown by the dotted line. To minimize pressure drop, always use the next larger size hose shown if the line passes between sizes listed.*

### Hose Length

Chart 1 gives the pressure drop in different-sized hoses based on hoses of 100-foot length, and is based on water as the material conveyed. For hoses of a different length, these values must be corrected. For example, a 100-foot length of 1/2" hose causes a pressure drop of 100 lbs./in.<sup>2</sup> at a flow rate of 10 gal./min. If the hose in question is 50 feet long, the pressure drop derived from Chart 1 must be corrected by multiplying the value by the ratio of the actual length to 100 feet, or 50/100, or 0.5. Therefore, the actual

pressure drop caused by a 50-foot length of 1/2" hose, at a flow rate of 10 gal./min. is 50 lbs./in.<sup>2</sup> (0.5 x 100 = 50 lb./in.<sup>2</sup>).

### Hose Fittings and Fluid Conveyed

In most cases, the end fitting openings are slightly smaller than the hose itself. However, this varies widely with hose fitting designs from 'full-flow' ends which have the same I.D. as the hose, down to as much as 1/8" smaller I.D. than the hose bore. To allow for this, assume a 10-to-15% greater flow rate than actually measured in the system when determining pressure drop.

Chart 1 is based on water as the material conveyed, and for other fluids it is necessary to correct for the difference in specific gravity and viscosity. Chart 3 lists common fluids, their specific gravities, viscosities, and corresponding correction factors. To determine the pressure drop for a specific fluid, first determine the pressure drop from Chart 1 for the hose length then divide this by the correction factor found in Chart 3. For example, the 50-foot length of 1/2" hose just described had a pressure drop of 50 lbs./in.<sup>2</sup> at a flow of 10 gal./min. of water. To determine the pressure drop if #2 fuel oil is the material conveyed, divide by 0.752 (from Chart 3)  $50 \div 0.752 = 66.5$  lbs./in.<sup>2</sup> pressure drop. If, on the other hand, the material conveyed is Type #3 gasoline, the pressure drop would be  $50 \div 1.19 = 42$  lbs./in.<sup>2</sup>

105	341.1	171.7			

**WARNING** Steam heat is hotter than 212°F (boiling water) and increases in temperature as pressure increases. See safety information on **page A-3**.

# General Hose Information

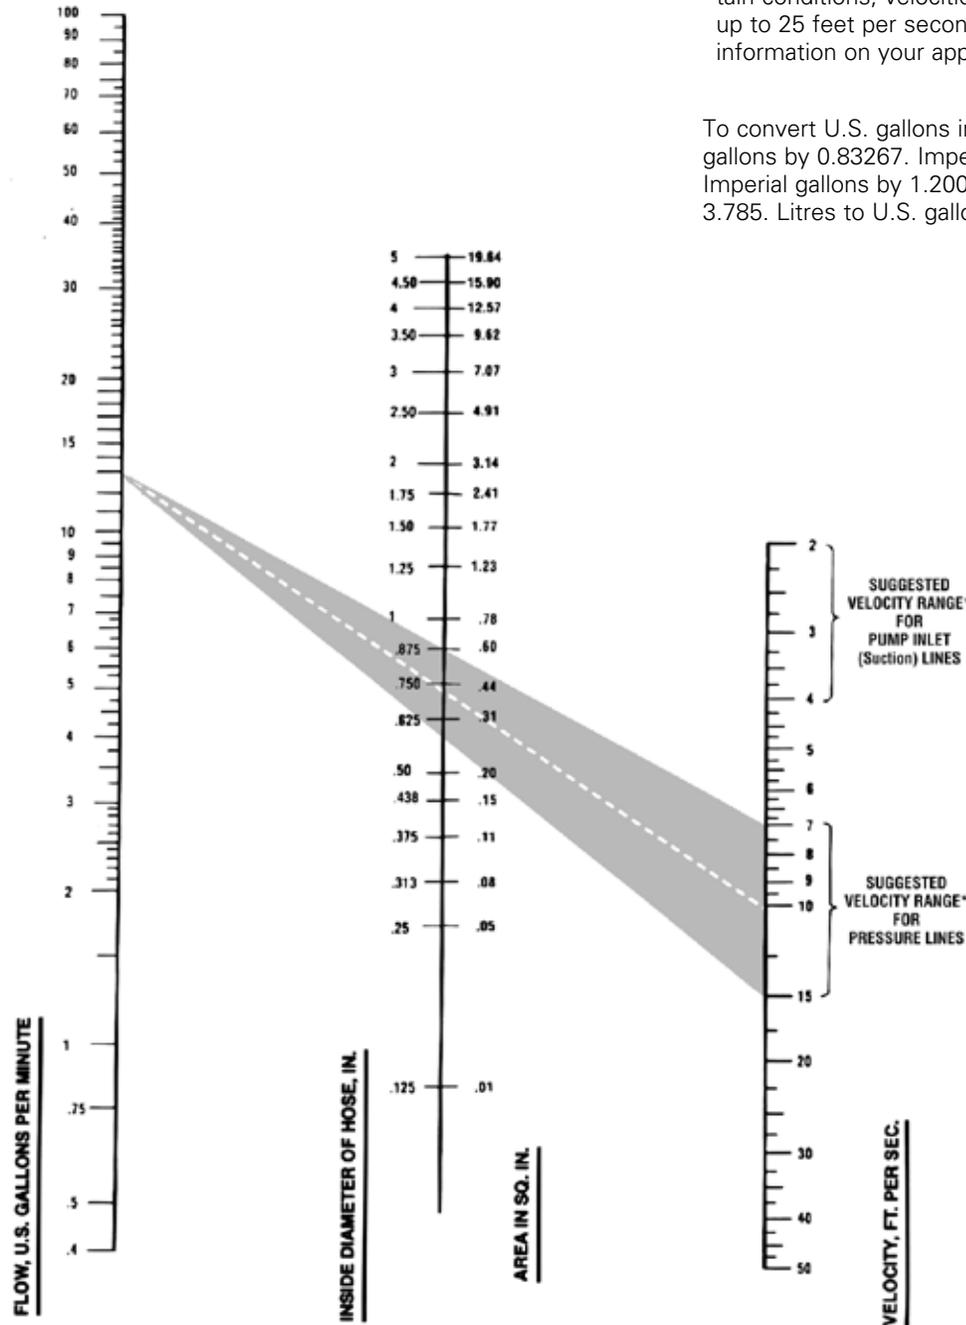

## Flow Capacities

### Flow Capacities of Hose Assemblies at Suggested Flow Velocities

The chart below is designed and provided as an aid in the determination of the correct hose size.

**Example:** At 13 U.S. gallons per minute, what is proper hose size within the suggested velocity range for pressure lines?

**Solution:** Locate 13 U.S. gallons per minute in the left hand column and 10 feet per second in the right hand column (the center of the suggested velocity range for pressure lines). Lay a straightedge across the two points. The inside diameter is shown in the center column nearest the straight edge.

For suction hose, follow the same procedure except use suggested velocity range for pump inlet lines in the right hand column.

Based on Formula

$$\text{AREA (SQ. IN.)} = \frac{\text{G.P.M.} \times 0.3208}{\text{VELOCITY (FT./SEC.)}}$$

\*Suggestions are for oils having a maximum viscosity of 315 S.S.U. at +100°F (+38°C) and operating at temperatures between +65°F and +155°F (+54°C to +69°C). Under certain conditions, velocities in pressure lines can be increased up to 25 feet per second. Contact Aeroquip with specific information on your application.

To convert U.S. gallons into Imperial gallons multiply U.S. gallons by 0.83267. Imperial gallons into U.S. gallons multiply Imperial gallons by 1.20095. U.S. gallons to litres multiply by 3.785. Litres to U.S. gallons, multiply by 0.2642.

\*Pressure drop values listed are typical of many petroleum based hydraulic oils at approximately +100°F (+38°C). Differences in fluids, fluid temperature and viscosity can increase or decrease actual pressure drop compared to the values listed.

### To Convert

U.S. gallons into Imperial gallons multiply U.S. gallons by 0.83267. Imperial gallons into U.S. gallons multiply Imperial gallons by 1.20095. U.S. gallons to litres multiply by 3.785. Litres to U.S. gallons, multiply by 0.2642.

# Eaton Terms and Conditions

## Standard Terms and Conditions of Sale

These terms and conditions of sale are between the Buyer and the Eaton Corporation affiliate selling the products or services (hereinafter referred to as "products") to Buyer (hereinafter referred to as "Seller") 1. Quotations. Unless otherwise indicated on the quote, written quotations by Seller shall expire automatically 90 days after the date appearing on the quotation unless Seller receives and accepts Buyer's purchase order within that period. Prior to the expiration date any quotation is subject to change by Seller at any time upon verbal or written notice to Buyer.

2. Acceptance of Purchase Orders. Notwithstanding any contrary language in Buyer's purchase order, each purchase order shall be subject to acceptance by an authorized employee of Seller and each transaction shall be governed exclusively by these Terms and Conditions of Sale. Such acceptance is expressly limited to these Terms and Conditions of Sale, and any additional or different terms proposed by Buyer are automatically rejected unless expressly assented to in writing by an authorized employee of Seller. All purchase orders accepted by Seller are deemed to be sales for commercial Buyers and shall not, unless plainly and prominently stated on the face of the purchase order, be considered a sale to any federal, state, provincial or municipal governmental entity either domestic or foreign. No contract shall exist except as hereinabove provided.

3. Price Changes. Prices are subject to change to the prices in effect at the time of delivery. Seller reserves the right to make any corrections to prices quoted due to clerical errors or errors of omission. In the event of any design, specification or ordered quantity changes representing a price increase, Buyer will be notified and afforded an opportunity to confirm.

4. Delivery. Lead times are for reference only and are subject to change. Design and/or specification changes are subject to review for possible adjustments to delivery. Order quantities subject to scheduled delivery dates must be mutually agreed upon.

5. Taxes. Any and all sales, use, or other permissible taxes assessed upon any sale or products sold shall be added to the purchase price of the products.

6. Payment Terms. Payment terms are net 30 days from date of invoice if Seller has approved Buyer's credit.

7. Packaging. The cost of standard bulk packaging for shipment in the United States and Canada is included in Seller's price. Additional charges may be imposed for special domestic packaging, overseas packaging, or special marking performed at Buyer's request and agreed to by Seller.

8. Shipment Terms. Unless Seller agrees otherwise, all shipments shall be freight collect F.O.B. origin (shipping point). Seller shall also be entitled to impose additional charges for the completion, at Buyer's request, of forms with respect to shipping. Unless otherwise agreed, shipment may be made by lots of reasonable commercial size as Seller deems appropriate.

9. Title and Risk of Loss. Risk of loss or damage in transit shall be borne entirely by Buyer at all times after the products are delivered to the carrier for shipment. However, the right to stop delivery in transit shall remain with Seller until payment in full has been received by Seller.

10. Delays or Default in Delivery. Seller shall have no liability to Buyer for Seller's delay or default in delivery due to strikes, secondary boycotts, riots, wars, accidents, fires, floods, explosions, vandalism, government embargoes, priorities or regulations, transportation delays, shortages of labor, fuel, materials, supplies, power, transportation facilities or tooling capacity or other similar or dissimilar causes beyond Seller's reasonable control. Under no circumstances shall Seller have any liability for penalties or other consequential damages of any kind resulting in whole or in part from Seller's delay in delivering, or failure to deliver, any products to Buyer as agreed.

11. Intellectual Property Infringement. With respect to all products manufactured to Buyer's specifications, Buyer shall indemnify and hold Seller harmless from and against any and all loss, cost, expense, claims, demands, suits and judgments arising from actual or alleged infringement of any third party intellectual property right. With respect to all other products sold by Seller, Seller shall defend any suit or proceeding brought against Buyer on claim that such product, or any part thereof, directly infringes any third party intellectual property right, provided that Seller is notified promptly in writing and given all necessary information, assistance and authority to defend the same. Seller shall pay all damages and costs awarded against Buyer as a result thereof. If as the result of such direct infringement, the court enjoins the use of any product, or part thereof, in the manner intended by Seller, Seller

shall at its sole expense and option: (a) procure for Buyer the right to continue using said product or part; (b) replace such product or part with a non-infringing product or part; (c) modify said product or part so that it becomes non-infringing; or (d) remove said product or part and refund its purchase price and transportation costs. Seller shall have no further liability for actual or alleged patent infringement except as provided herein.

12. Design and Technical information. Seller claims proprietary rights in the items and information associated with this order. Drawings and technical information are issued in confidence for engineering information and mutual assistance only and may not be publicly disseminated, reproduced or used by Buyer without Seller's prior written consent and shall be returned upon the earlier of Seller's written request or when its purpose has been served.

13. Warranty. Seller's warranty is set forth in Seller's Warranty Policy Number M-HYOVTB001- E, which can be accessed on the Eaton Hydraulics Product Literature website [www.eaton.com/hydraulics/](http://www.eaton.com/hydraulics/) warranty. THE WARRANTY IS BUYER'S EXCLUSIVE REMEDY AND SELLER HEREBY EXPRESSLY DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING THE IMPLIED WARRANTY OF MERCHANTABILITY AND THE IMPLIED WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE. Seller's warranty shall constitute the sole remedy of Buyer and the sole liability of Seller.

14. Cancellation. Changes and/or cancellations to existing schedules or orders are subject to Seller's acceptance and any applicable cancellation charges (and possible increase in per piece price due to reschedules). Cancellation charges will be determined by the type of product and the stage of completion. Cancellation charges for special products will be based on the selling price less amounts saved at the time of cancellation. Seller will accept temporary holds on orders for rescheduling purposes for a period not to exceed 30 days. If at that time a reschedule is not received, Seller reserves the right to recommence shipments in accordance with the original schedule or cancel the order.

15. Returns. No products shall be returned to Seller, whether for inspection, repair, replacement, or any other reason, without prior written approval from Seller. Products and parts must be returned in new or like new condition with complete identification in accordance with Seller's instructions or the shipment may not be accepted. All returns must be sent to Seller freight prepaid F.O.B. destination unless otherwise instructed. Where written authorization has been obtained to return products and parts for reasons beyond warranty, a restocking charge of twenty five percent (25%) and any additional transportation charges are applicable.

16. Minimum Order. Minimum order amount is \$100.00.

17. Remedies. Any lawsuit or legal claim for breach of this order must be brought within one year after the breach occurs.

18. Currency. Unless otherwise indicated on the invoice, all payments are to be made in United States dollars.

19. Governing Law. The terms and conditions of this agreement shall be construed according to the laws of the state of Ohio.

20. Limitation of Liability. THE REMEDIES OF THE BUYER SET FORTH IN THESE TERMS AND CONDITIONS OF SALE ARE EXCLUSIVE AND ARE ITS SOLE REMEDIES FOR ANY FAILURE OF SELLER TO COMPLY WITH ITS OBLIGATIONS HEREUNDER. NOTWITHSTANDING ANY PROVISION IN THESE TERMS AND CONDITIONS OF SALE TO THE CONTRARY, IN NO EVENT SHALL SELLER BE LIABLE IN CONTRACT, WARRANTY, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY) OR OTHERWISE FOR DAMAGE TO PROPERTY OR EQUIPMENT OTHER THAN PRODUCTS SOLD HEREUNDER, LOSS OF PROFITS OR REVENUE, LOSS OF USE OF PRODUCTS OR ANY ASSOCIATED EQUIPMENT, COST OF CAPITAL, COST OF SUBSTITUTE EQUIPMENT, FACILITIES OR SERVICES, DOWNTIME COSTS, DELAYS, CLAIMS OF CUSTOMERS OF THE BUYER OR OTHER THIRD PARTIES OR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES WHATSOEVER, REGARDLESS OF WHETHER SUCH POTENTIAL DAMAGES ARE FORESEEABLE OR IF SELLER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. THE TOTAL CUMULATIVE LIABILITY OF SELLER ARISING FROM, CONNECTED WITH, RESULTING FROM OR RELATED TO THESE TERMS AND CONDITIONS OF SALE WHETHER THE CLAIMS ARE BASED IN CONTRACT, WARRANTY, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY) OR OTHERWISE, SHALL NOT EXCEED THE PRICE OF THE PRODUCT ON WHICH SUCH LIABILITY IS BASED.
